Descriptors - \*Certification, \*Health Occupations, Health Occupations Education, \*National Surveys, Organization, Policy, Professional Education, Questionnaires, \*State Licensing Boards, Statistical Data

About 25 health professions and occupations are licensed by one or more states according to the survey of state licensing provisions by the National Center for Health Statistics. Data is presented in 22 chapters on the licensure of administrators, chiropractors, clinical laboratory personnel, dental hygienists, dentists, professional engineers, midwives, naturopaths, practical nurses, professional nurses, opticians, optometrists, pharmacists, physical therapists, psychologists, "doctors of medicine," "doctors of osteopathy," podiatrists, radiologic technologists, sanitarians, social workers, and veterinarians. Information includes occupations licensed by each state, trends in occupational licensing, compulsory versus voluntary acts, organizational patterns of licensure responsibility, composition of licensing board, powers and duties of licensing boards, qualifications for initial licensure, state policies with regard to special licensing, and licensure statistics; an 18 page summary is arranged under these headings. There are 127 tables and a sample questionnaire is included in the appendix. (JK)

### **Preface**

In 1951, the Governors' Conference requested The Council of State Governments to make a survey of professional and occupational licensing practices in the several States. The study was undertaken, working through the Governors' offices, and resulted in the report "Occupational Licensing Legislation in the States" which was issued by the Council in 1952. This excellent report has long since been out of print, and the information, out of date. Nothing comparable for the entire United States has been published in the meantime.

In 1961, the Western Conference of The Council of State Governments conducted a survey of professional and occupational licensing practices in 13 Western States. The initial questionnaire was distributed in the summer of 1962. The report, "Professional and Occupational Licensing in the West," was issued by the Western Conference in August of 1964.

The interest of the National Center for Health Statistics in occupational licensing grows out of the fact that one of the objectives of the Center is to determine the numbers and geographic location of health manpower in various fields. Since the State organizations that administer the licensing statutes are one source of health manpower statistics, the Center approached The Council of State Governments, in the spring of 1965, in regard to a cooperative project to make a national survey of licensing practices and to determine the availability of statistics for the health professions and occupations regulated by State laws.

Under the resulting contract between the Council and NCHS, the initial form and detailed questionnaire were jointly designed, and then reproduced and distributed by the Council in the fall of 1965. A followup of nonresponding agencies was made by the Council early in 1966, with subsequent requests for information by the Center. The analysis of the findings and the preparation of the report are the contributions of the National Center for Health Statistics.

In the collection of the data, The Council of State Governments worked through the offices of the Governors to secure the cooperation of the central departments of registration or licensing and, where no central department of licensing existed, with the individual licensing boards themselves. This procedure often resulted in differing interpretations in response to particular questions since terminologies and meanings vary among the States and even among occupations within the same State.

The questionnaire material has been combined with data submitted by various professional associations and with information obtained from a review of relevant statutes where readily available. As far as possible, the conflicts have been resolved. It should be noted that the questions were

designed to reflect actual practices of the licensing boards, as well as the legal requirements.

Appreciation and thanks are extended to Mr. Brevard Crihfield, Executive Director, The Council of State Governments, and to Mrs. Ruth L. Turk, Secretary, Interstate Clearing House on Mental Health of the Council, who worked on the survey in cooperation with Mrs. Pennell.

It is hoped that this report will provide the background information essential to an understanding of present licensing systems as they exist in the several States for regulating the entrance into and continued practice of the health professions and occupations.

October 1967

# State Licensing of Health Occupations

Maryland Y. Pennell, M.S.\* and Paula A. Stewart, M.P.H., Health Manpower Statistics Branch

#### **SUMMARY**

About 25 health professions and occupations are licensed by one or more States, according to a survey of State licensing provisions conducted by The Council of State Governments in cooperation with the National Center for Health Statistics of the U.S. Public Health Service. The survey covered those occupations in the health field for which the licensing, registration, or certification procedure is provided by State law, is administered by an agency of the State, and meets the following criteria:

1. The license, certificate of registration, or other credential is issued to an individual, rather than to a company or organization;

2. The license authorizes an individual to practice or engage in an occupation or profession or to use a particular title;

3. To secure a license, the applicant must (a) have certain educational qualifications, or (b) serve an apprenticeship or have other experience, or (c) pass an examination as to his knowledge or skills, or (d) meet any combination of these requirements.

Two exceptions have been made to cri-

terion 1 above, by the inclusion in this report of (a) eight States that set requirements for clinical laboratory personnel within the laboratory licensing law, and (b) two States that license individuals and firms to engage in the business of a dispensing optician.

Legislation usually establishes educational, experience, and personal qualifications; it requires successful completion of an examination; and provides for issuance of a license as a prior condition for entrance into the occupation. The administration of the statute is entrusted to a department of government or to an independent board which is usually composed of members of the occupation who have been selected from lists of nominees submitted by associations representing the occupation.

The main objectives of licensing laws are to control entrance into the occupation and to support and enforce standards of practice among licensed practitioners. The accomplishment of these objectives usually involves such activities as:

- 1. Examination of applicants' credentials to determine whether their education, experience, and moral fitness meet statutory or administrative requirements.
- 2. Investigation of schools to determine

Chief, Health Manpower Statistics Branch from October 1964 to November 1967.

whether the training programs meet requisite standards.

3. Administration of examinations to test the academic and practical qualifications of applicants to determine if preset standards are met.

4. Granting of licenses on the basis of reciprocity or endorsement to applicants from other States or foreign countries.

fessional standards of practice; investigation of charges of violation of standards established by statute and regulation; suspension or revocation of violators' licenses; and restoration of licenses after a period of suspension or further investigation.

6. Collection of various types of fees.

### Occupations Licensed by Each State

All States and the District of Columbia require that the following health personnel have a license to practice: dental hygienists, dentists, professional engineers (which include environmental health engineers, such as industrial health, public health, or sanitary engineers), practical nurses, professional nurses, optometrists, pharmacists, physicians (M.D.), osteopathic physicians (D.O.), podiatrists, and veterinarians. Thus all States and the District of Columbia require licensure for practice in 11 of the 25 health professions and occupations listed in table A.

Forty-nine of the jurisdictions license chiropractors and physical therapists. From 17 to 36 States license midwives, opticians, psychologists, and sanitarians or sanitary inspectors. Fewer than one-third of the States license clinical laboratory directors including bioanalysts, clinical laboratory personnel such as medical technologists or technicians, naturopaths and other drugless healers, and social workers. Two States license nursing home administrators. Health department administrators, hospital administrators, and radiologic technologists (X-ray technicians) are licensed in one State each.

The number of health occupations licensed by a single State ranges from 12 to 21. California leads with the licensing of 21 occupa-

tions; followed by Florida, Hawaii, and New Jersey each with 20. The States that license the fewest occupations are Iowa, Mississippi, Missouri, Texas, and Vermont.

The indication as to whether a specific jurisdiction licenses an occupation is based in large measure on the replies received to the form enclosed in the June 1965 letter to each State Governor and to the Department of Occupations and Professions in the District of Columbia (see appendix). The questionnaires that followed the initial inquiry sometimes refuted the earlier response. Since all questionnaires were not returned, the entries in table A are subject to error.

The original answers have been updated as much as possible. Hence there are references to 1967 laws, although detailed information may be lacking.

### Trend in Occupational Licensing 1

In the early years, only two occupations were generally licensed by the State—medicine and law. Statewide regulation of the medical profession covering license and competence to practice was established prior to 1800 in many of the States then in existence. Legislation endowed the State medical societies with authority to examine and license. Local and State medical societies had been concerned with the training and conduct of practitioners and had appealed to the States for legal control over the increasing numbers in the profession.

By the middle of the 19th century, however, the accordance of such power to medical societies had been largely repealed or amended. Standards of professional competence were in need of reform, with the result that States reversed their earlier position and assumed responsibility of regulating the professions as a means of affording greater protection to the public.

Occupational groups began organizing into associations at the national level just prior to the Civil War. The American Medical Association (organized in 1847), American Pharmaceutical Association (1852), American

<sup>&</sup>lt;sup>1</sup> This section on trends in licensing is based on the 1952 publication by The Council of State Governments, cited in the preface.

Dental Association (1859), and American Veterinary Medical Association (1863) were among the first to do so. The national associations urged legislation which protected their status, codes of ethics, and standards of competence and which established a legal roster of qualified practitioners. They were granted the right to control or be represented on the licensing boards set up to regulate the profession in question.

When a given State association succeeded in sponsoring licensing legislation, other State organizations of the same profession followed their precedent. New York and Virginia, for example, adopted the first successful statutes licensing nurses in 1903. By 1910, 25 States had enacted licensing statutes and by 1920, a total of 47 States were covered. The American Nurses' Association (ANA), organized in 1896, attempted to improve the original law and worked through the State associations for uniform legislation.

The increased emphasis placed on functional specialization by colleges and professional schools in the first decades of this century, and a desire for occupational identification led several occupations to seek self-government. Each of the newer occupations requested a separate licensing statute and board; for example, chiropractors, osteopaths, and podiatrists sought separation from the medical profession.

The occupations now licensed in one or more States include several that have entered the licensing field only in the past three decades. Among these are opticians first licensed in 1935, medical technicians (1936), psychologists (1945), social workers (1945), and X-ray technicians (1964).

Analysis of table B, which summarizes data from the first table of each chapter dealing with the specific occupation, indicates that the largest number of statutes enacted in any 10-year period became law between 1910 and 1920. These 130 statutes licensed 14 occupations. However, in the decade from 1940 to 1950 which witnessed the enactment of fewer statutes 17 occupations were licensed.

### **Compulsory Versus Voluntary Acts**

The tendency in occupational licensing has been to move toward a compulsory or mandatory licensing act, that is, to prohibit by statute the practice of the particular occupation to anyone who is not properly licensed. The movement toward compulsory licensing often begins with a permissive or voluntary statute which prohibits the use of a particular title rather than the practice itself.

Frequently the association which represents the practitioners of a particular occupation attempts to control the field through a system of registration or certification. For example, in 13 States and the District of Columbia there are nonstatutory provisions for certification of psychologists by the profession. Where statutory provisions are present, a certificate or registration may be issued instead of a license. The terms license, registration, and certification appear to be used interchangeably in some States.

The nature of the licensing statute currently in force has been classified as compulsory or voluntary according to the following definitions:

Compulsory.—Only persons holding a license are permitted to practice the occupation, and unlicensed persons are prohibited from working in the field.

Voluntary.—Only persons holding a license are authorized to use a particular title or official designation; unlicensed persons are not prohibited from working in this field but they may not use the protected title.

It should be noted that some laws and regulations include exceptions which may invalidate compulsory provisions.

Medical practice legislation is typical of the compulsory licensing statute. All States and the District of Columbia have enacted such restrictive legislation, embodying the principle that no person may practice the profession of medicine unless he has complied with certain conditions and then applied for and received a license. State regulation of chiropractors, dental hygienists, dentists, opticians, optometrists, osteopaths, pharmacists, podiatrists, and veterinarians is also mandatory.

<sup>1</sup> Statutes which govern more than 1 occupation are treated as separate statutes for each occupation.

Typical of the voluntary statute are the laws providing for the optional registration of practical nurses. In almost half of the States a person may make himself available for employment as a practical nurse as long as he or she does not use the title "licensed practical nurse." The desire to protect the public through higher standards for nursing care has led the nursing associations to strive for a compulsory licensing system, with the result that only 23 States currently have voluntary registration for practical nurses and 9 States, for professional nurses. Physical therapists, psychologists, sanitarians, and social workers also have voluntary licensing statutes in some of the States.

Exclusions and exceptions from licensure requirements are always made for Federal

employees in the course of their employment and frequently for State and municipal workers. Personnel engaged in research or educational pursuits are sometimes excluded, as are students and auxiliary personnel working under the supervision of a licensed practitioner. Out-of-State licensed practitioners who provide occasional or contiguous-area services may also be exempt from licensure. Other exemptions may be specified in the laws or regulations for the individual occupation.

### Organizational Patterns of Licensure Responsibility

The licensing agency in each State is identified in the second table of each chapter.

<sup>2</sup> Excludes 5 statutes for midwives and 2 for naturopaths which only permit renewal of license.

Where a board or committee is affiliated with a department of the State government, the department is indicated below the name of the committee or board. The State data for all 25 occupations have been summarized in table C.

A few departments license occupations directly. Where there are boards attached to the department, they may be largely advisory in nature or they may possess broad powers. Many of these boards function independently with the department providing only administrative assistance. However, relations between boards and departments differ greatly. Boards listed without a department are independent.

The usual pattern for State organization is to establish a separate board for licensing each occupational group. Generally a separate law governs all aspects of the organization and operation of each board. Of the 799 State agencies, 432 are autonomous licensing boards. This practice is prevalent in about half of the States.

Some of the States have taken steps to centralize the licensing of occupations within a department of registration. In table C the listing for this department includes all departments whose title indicates the functions of licensing, regulation, or registration. Examples of such coordinated departments are the California Department of Professional and Vocational Standards, District of Columbia Department of Occupations and Professions, Hawaii Department of Regulatory Agencies, Illinois Department of Registration and Education, Massachusetts Department of Civil Service and Registration, Michigan Department of Licensing and Regulation, Utah Department of Registration, and Virginia Department of Professional and Occupational Registration.

Among the States that have centralized licensing in the department of health are Nebraska and Rhode Island; while centralized licensing is to be found in the department of state in Colorado, Georgia, Pennsylvania, and Vermont; and in the department of education in Missouri and New York. Examples of other locations of occupational licensing agencies are as follows: Alaska De-

partment of Commerce, Idaho Department of Law Enforcement, New Jersey Department of Law and Public Safety, Tennessee Department of Insurance and Banking, and Washington Department of Motor Vehicles.

Licensing functions may or may not be carried out by the department. The degree of departmental participation varies from administrative support to active participation in licensing. The third table of each chapter provides information on functions of the board and the department.

Where there is a central organization for occupational licensing, this department may regulate not only the bulk of those in the health field but many additional occupations. The California Department of Professional and Vocational Standards, for example, lists about 50 occupations in their 1964 report; the New Jersey Department of Law and Public Safety regulates approximately 30 occupations.

### **Composition of Licensing Boards**

Most State boards engaged in the licensing of occupations in the health field are composed of representatives of groups with direct interest in areas regulated by the boards. The occupational data in table D have been summarized from the second table of each chapter concerned with the individual occupations.

State officials who serve as ex officio members of one or more occupational licensing boards are usually the heads of the departments which are directly concerned with the licensing of the occupation in question. Such ex officio members have not been included as board members, when they could be so identified. Very few of the boards include representatives of the general public.

About half of the occupational licensing statutes require that all board members be licensed practitioners in the occupations regulated by the boards on which they serve. In many cases they are required to have practiced within the State for a specific number of years. Faculty members of professional educational institutions are rarely specifically included. With a few exceptions, only dentists serve on dental licensing boards, only op-

<sup>&</sup>lt;sup>1</sup> Agencies which license 1 or more occupations are counted separately for each occupation licensed.

<sup>&</sup>lt;sup>2</sup> Includes all departments whose title indicates the functions of licensing, regulation, or registration. Examples are the California Department of Professional and Vocational Standards, Hawaii Department of Regulatory Agencies, Michigan Department of Licensing and Regulation, and Utah Department of Registration.

Excludes 1 additional agency for physical therapists.

<sup>4</sup> Excludes 1 additional agency for osteopathic physicians.

Not applicable for midwives who are licensed at the local level.

tometrists on optometry boards, pharmacists on pharmacy boards, psychologists on psychology boards, and veterinarians on veterinary medical boards.

At the other extreme are a few occupations licensed by boards which include no members of the particular occupation but include members from related occupations. Dental hygienists are licensed in all States and the District of Columbia and, in each, licensing is by the regular dental board which includes no dental hygienists. In some States, practical nurses are licensed by boards of registered nurses on which no practical nurses serve. A similar situation exists for midwives who are licensed by boards which do not include any members of that occupation. For at least eight other occupations there are a few State boards without representation from the particular group.

In the fields of medicine, osteopathy, physical therapy, and podiatry about half of the State licensing boards are limited to practitioners in the licensed occupation while the remainder have mixed membership. Chiropractors, engineers, and professional nurses also have relatively large numbers of State boards composed of representatives of their own groups.

The boards that license doctors of medicine usually license related professions such as osteopaths, physical therapists, and podiatrists (table 82). They may have additional representatives of these healing arts serving on the board at that time; however, these persons are not considered as members of the medical boards for the licensing of physicians (table 81). The boards that license professional engineers may serve land surveyors and/or architects (table 30).

Board members are usually appointed by the Governor, from lists of names submitted by associations representing persons practicing in the field. Even if the law does not have these provisions, many Governors follow the policy of consulting the associations before making appointments.

The range in the number of board members is from 3 to 20 persons. However, relatively few of the boards have as many as 10 members. Usually a majority of the members of

the board are within the licensed occupa-

### **Powers and Duties of Licensing Boards**

Licensing agencies possess a large array of powers and duties related to (1) examination or other determination of eligibility of applicants for licenses; (2) issuance of licenses; (3) suspension, revocation, and restoration of licenses; (4) enforcement of licensing statutes; and (5) approval and supervision of schools. The boards make specific rules and regulations governing the licensing and the practice of the occupations. They keep all necessary records and make whatever reports are required.

The functions of the State licensing boards are presented in the succeeding chapters on each occupation—usually in the third table. The discussion here is a brief summary of the importance of each of the five functions mentioned above.

Examination.—Most licensing boards prepare, conduct, and grade all examinations of persons applying for licenses. They determine the subject matter to be covered by examinations, the kind of examination to be given, and the passing grade—all factors which influence the number of applicants who will succeed in obtaining licenses.

If the board prepares or determines content, the examination is tabulated as a board function, even though the department may schedule and conduct the actual tests. Examinations are generally held twice a year. Usually the board determines what type of examination will be used—written, oral or practical, or a combination of these.

A board may decide to use all or part of a national examination, such as those prepared by the Professional Examination Service of the American Public Health Association or by national boards of examiners.

Issuance of licenses.—The formal issuance of licenses to applicants who meet all qualifications established by law and by the board is one of the routine duties of most boards. Many statutes require licenses to be renewed periodically and thus make it possible for the boards to maintain a current list of practi-

4 Excludes 1 of 2 agencies in Maryland and in Nebraska.

tioners. Such lists aid in enforcement of laws directed against unauthorized practice.

In States where licensing boards have been placed within or attached to a department of the State government, the department usually performs clerical tasks connected with the issuance of licenses. It may formally issue licenses to applicants certified or recommended by boards or committees.

Suspension and revocation of licenses.— Licensing statutes generally specify grounds for suspension or revocation of licenses, such as obtaining a license by fraud, performance of actions prohibited by the statute, and conviction of a felony. The numbers and kinds of acts prohibited by licensing laws vary considerably.

Legislation may include salient features of professional codes common to the profession and generally accepted by their practitioners and the public. Violation of the code would then constitute grounds for suspension or revocation of a license.

Procedures for suspending, revoking, and reinstating licenses are usually specified in statutes but sometimes they are specified in the State's administrative procedure act or left to the discretion of the board. Usual requirements include a written notice of charges and a hearing at which the practitioner may offer evidence in his behalf. Frequently, licensing boards conduct the hearings, but the power to issue formal revocation orders may rest with the board or the head of the licensing department, and in a few instances, is vested in the courts.

Some of the States provide for disciplinary committees to screen charges of professional misconduct in a few occupations. They handle minor cases and refer those violations punishable by suspension or revocation of a license to the licensing agencies.

Enforcement of licensing statutes.—The enforcement of licensing laws involves determining whether the practitioner has a license and whether he is practicing in accordance with provisions of the license and statutes. To determine if practitioners have licenses is simplified since applicants seeking employment are usually required to present a current license, while those who are self-employed must display their licenses in their place of business. Periodic renewal of licenses is an aid in checking to see if the practitioner's license is valid.

It is a more difficult process to determine whether practitioners are violating sections of the regulatory statutes since standards of performance must be formulated in broad terms. In general, licensing agencies follow the policy of investigating a practitioner's compliance with the law only when a complaint is filed. To a marked degree, the enforcement of licensing laws depends on the voluntary compliance of individual practitioners and the efforts of occupational associations.

Approval and supervision of schools.—Statutes usually specify that applicants must receive their training in schools approved by licensing agencies. The standards used in evaluating the schools and the ability of the approving agencies to ineasure compliance with these standards are major factors in this requirement.

Licensing boards may accept a national association's list of approved schools. Examples of national accrediting bodies are the councils on education of the American Dental

Association, American Medical Association, American Optometric Association, and American Veterinary Medical Association. Licensing boards may also accept approval by appropriate regional college accrediting bodies. In some jurisdictions the department of education may be designated as the State agency to inspect and accredit schools.

In addition there are occupational licensing boards which inspect and certify programs or schools. The standards set by the board or statute are usually in terms of length of training deemed necessary, curriculum content, staffing, qualifications of students, and type of facility to be provided. Nursing practice acts in many States grant broad powers to licensing agencies in this regard, although nursing programs accredited by the National League for Nursing (NLN) are also accepted.

### Financial Operations of Licensing Boards

Licensing laws or regulations provide for payment of various fees to finance the board's operations. Applicants may have to pay fees when they submit their original applications for licenses, when they take examinations, when licenses are issued, and when they are renewed.

The initial fee covering application, examination (when required), and issuance of license is usually \$25 to \$50 but these fees vary greatly ranging from no charge to \$100. Where no fee is required, the licensing agency is usually a State department financed through the general revenue fund. Renewal fees may be as high as \$60 but are likely to be \$5 to \$10 (table E).

Each year most States set renewal fees within prescribed limits. These fees also vary according to residence and activity status. In a number of occupations a nonresident renewal fee may be higher or lower than that for residents. The fees given in the fifth table of each chapter are resident renewal fees.

Frequently occupations such as professional nurses allow inactive status for those practitioners who are employed out of State or are not active in the profession at the time of license renewal. Fees for inactive

registration may vary from zero to \$3. No further fee is required until the practitioner requests a change to active status, at which time the current renewal fee must be paid. In most occupations military personnel are exempt from payment of renewal fees until their discharge from active military duty.

A variety of methods are used for financing the administration of occupational licensing boards. The most common means is financing from the fees collected by the boards. The boards retain the fees either in their own State board accounts or deposit them with the State treasurer in a special board fund. Frequently when fees are deposited in the general fund an amount proportional to the fees deposited is appropriated to finance the board. The amount available to each board for operating costs is determined by the volume of fees collected.

As shown in table E, about 60 percent of the boards are financed entirely by fees. Of the 799 total boards for the health occupations, 176 have State board accounts and 302 operate through special funds in the State treasury. Sometimes in the latter case pas-

sage of an appropriation act by the State legislature is required but the legislative appropriation tends to equal the amounts deposited. Thus funds collected from members of a licensed occupation are frequently used solely to regulate the occupation, and the licensing boards are largely independent of control by other agencies of State government. In some States funds in excess of a set amount at the end of the year revert to the general revenue or school fund.

The other 40 percent of the boards are financed through general revenue funds. Most of these boards are not free from central financial controls.

#### **Renewal of Licenses**

Most statutes indicate that licenses must be renewed or licentiates must register at stated intervals. The intervals may be specified in the law or established by regulations. Usually the only information required for renewal of a license is the present name and address of the practitioner.

Some States distinguish between renewal of licenses and registration. These States reported that a license is in good standing unless suspended or revoked but the licentiate cannot practice unless he is currently registered. Failure to register annually or biennially does not theoretically invalidate the license; however, payments of the renewal fee and a penalty fee are usually required for reinstatement to active status.

About three-fourths of the total occupations licensed in the health field are required to have annual renewal. The remainder are biennial except for a few with longer periods of 3 or 5 years between renewal of license or registration (table F).

At least 28 of the total number involved are permanent registrations that need not be renewed. Five to eight of the licensing agencies for doctors of medicine, doctors of osteopathy, and doctors of veterinary medicine have no requirement for renewal. One or two licensing agencies for each of seven other health occupations also do not require periodic registration.

Licenses are frequently issued for calendar

or fiscal years with expiration dates of December 31 or June 30. A number of States have fiscal years which end in other months. In a few instances the expiration date is related to the birthday of the practitioner or to the original date of licensure—both practices spreading the renewals over the entire year. Were a uniform but unique date to be selected for each occupation the collection of licensure statistics would be greatly simplified, with resulting better identification of the supply of licensed practitioners.

The expiration date for renewal of license does not necessarily indicate that the license becomes invalid at that time. A grace period of 30 days or more may be allowed by the licensing agency.

Most licensing agencies mail out renewal notices well in advance of the expiration date. The interval may be 1 or 2 months, or as long as 6. Only a few boards depend on the practitioner to request renewal of his license without formal notification of its expiration.

#### **Qualifications for Initial Licensure**

Applicants for occupational licenses may have to meet four different types of qualifications—personal, educational, experience, and examination. The discussion here pertains to initial licensing only, based on the requirements presented in the fourth table of each of the succeeding chapters.

Requirements may differ with regard to the issuance of temporary licenses, the licensing of practitioners from other States by reciprocity or endorsement, or the licensing of persons educated outside of the United States. State policies with regard to issuance of these licenses are discussed in another section of this report.

Personal qualifications.—Requirements such as minimum age, good moral character, good health, citizenship, and a minimum period of residence in the State are often specified in the law or regulations.

For initial licensing in health occupations the minimum age permitted is usually 21 years. For occupations that do not require a bachelor's degree, the age limit may be lowered to 18 or 19, as in the case of dental

<sup>1</sup> Excludes 1 of 2 agencies in California.

hygienists and practical nurses. The minimum age of 21 years (or 19 in Alabama) for physicians is not usually pertinent considering that few doctors complete their medical education prior to age 25. The required length of training and/or experience in the field of professional engineering is recognized in those States that set the minimum age at 24 or 25 years. This requirement, however, could preclude licensure of the well qualified young graduate.

Most States require applicants to be of good moral character. Fulfillment of this requirement is usually in the form of references attesting to the character of the applicant. Although the laws or regulations nearly always carry the wording relating to character,

there are exceptions in the licensing of physical therapists, sanitarians, and veterinarians.

Qualifications of good health appear less frequently than those of good moral character. With the exception of midwives, very few statutes have a provision requiring a physical examination. Statutes for midwives specify the type of examination to be given. In three or four States dental hygienists and dentists are required to have a physical examination. Practical nurses and professional nurses are required to submit a statement of good health in 11 and 8 States respectively. Although good health may be specified in the statute, documentation may not be requested by the licensing agency.

ERIC

Excludes 1 of 2 agencies in Maryland and in Nebraska.

Applicants generally must be U.S. citizens or have filed a declaration of intention to become citizens. A few statutes require that applicants be residents of, or have received their training in, the State where they are seeking licensing. For example, Hawaii requires 1 year of residence for the licensing of dentists, pharmacists, and physicians; Utah requires residence of 90 days for the licensing of pharmacists, physicians, and podiatrists. Arkansas has a residence requirement for practical nurses and professional nurses, and as many as eight States have residence requirements for psychologists prior to initial licensing.

Educational qualifications.—The various professions have placed increasing emphasis on formal education as a necessary prerequisite for licensure. Thus qualifications in the fourth table of each chapter are stated in terms of minimum preprofessional and professional education and experience.

A minimum of 2 to 4 years of high school education and 9 to 15 months of vocational training is required for entrance into the field of practical nursing. High school graduation or the equivalent followed by 1 or 2 years of additional education is the usual requirement for dental hygienists and opticians. College graduation is likely to be specified for physical therapists and sanitarians. A total of 5 or 6 years—often 2 years of college and 3 or 4 years in an approved school of the health professions—is the licensing provision common to chiropractors, dentists, optometrists, pharmacists, physicians, podiatrists, and veterinarians. For psychologists a doctor's or master's degree is usually specified. The amount of education required is discussed in detail in the analysis of each health occupation.

Applicants must fulfill educational requirements in approved schools. Some licensing boards set their own standards for approval, while others accept standards established by occupational associations or official educational agencies, as mentioned earlier in this report.

Many licensing statutes contain provisions permitting boards to accept alternates or equivalents in place of specified educational requirements. For example, in some States licensure of professional engineers requires 8 years of experience, an alternate being 4 years of engineering school and 4 years of experience. Opticians may qualify for licensure with 1 to 4 years of experience or 1 to 2 years of formal education.

Experience qualifications.—In addition to formal education requirements, applicants for licensure in many of these health occupations must fulfill certain experience requirements. A 1-year internship following graduation from a college of medicine or osteopathy is such an additional requirement in two-thirds of the States, and is the usual practice even in those States which do not have this requirement by law. Only two States (Arizona and New Jersey) currently specify that 1 year of post-graduate medical education may be substituted for the internship. Internship is also required by a few States in the field of podiatry. In other occupations, such as dental hygiene, clinical experience is part of the formal educational program. In most States other types of supervised practice or apprenticeship must be completed before a license is granted to professional engineers, opticians, pharmacists, psychologists, and sanitarians. A few States specify a brief period of experience for veterinarians.

Many licensing statutes provide alternative combinations of education and experience requirements. Applicants may qualify for licensure by fulfilling any of these combinations. Examples have been cited for professional engineers and opticians. In these, field experience may count for more than formal education, whereas in medicine the emphasis is on formal education supplemented by an internship.

Examinations.—Applicants who meet the personal, education, and experience requirements are eligible to be examined for licensure. Examinations are a prerequisite for initial licensure in nearly all occupations included in this study. The functions of the boards in relation to the preparation, administration, and grading of these examinations have already been mentioned. Where exam-

inations are not required there is usually a review of credentials.

Examinations may be written, oral or practical, or any combination of these types. Written examinations are a usual requirement for all occupations in the health field. Oral examinations are almost always required of applicants in the fields of chiropractic and veterinary medicine, and by some State boards in other fields such as dental hygiene, dentistry, engineering, opticianry, optometry, pharmacy, physical therapy, medicine, osteopathy, podiatry, psychology, and environmental sanitation. Practical or clinical examinations are usually required of applicants in the fields of chiropractic, dental hygiene, dentistry, opticianry, optometry, and pharmacy; by about half the licensing boards for podiatry and veterinary medicine; and by a few State boards for engineering, physical therapy, and osteopathy.

As noted earlier, the board may use all or part of a national examination. Examinations prepared by the Professional Examination Service of the American Public Health Association are used in some States to measure the competence of practitioners in environmental health, hospital administration, medicine, pharmacy, physical therapy, psychology, and veterinary medicine. Examinations prepared by other national organizations are used in a number of occupations. For professional nurses and for practical nurses the boards in all States give the examination prepared through the ANA Council of State Boards of Nursing and the NLN Test Construction Unit and Evaluation Service. For engineers there is the National Council of State Boards of Engineering Examiners, and for physicians, the National Board of Medical Examiners. As of 1967, 14 States were using the examination prepared by the National Board of Medical Examiners.

In lieu of the State board written examination, the board may choose to accept a certificate from a national board of examiners. Such national examining bodies exist for chiropractors, dental hygienists, dentists, optometrists, doctors of medicine, doctors of osteopathy, and podiatrists. In the field of physical therapy several boards will accept

certification from the American Registry of Physical Therapists. About 18 of the licensing agencies for psychologists will waive the written examination for diplomates of the American Board of Examiners in Professional Psychology.

A special basic science examination may be given by independent basic science boards to applicants for licenses in several branches of the healing arts. When this examination is required, applicants for licenses must have certification from basic science boards before taking examinations in their own fields. About half the States have this requirement for applicants in chiropractic, medicine, and osteopathy, and a few States, for those in dentistry and podiatry.

### State Policies With Regard to Special Licensing

The previous section has dealt with the variations in requirements for entrance into given occupations in the health field. Another method of entry is under the "grandfather clause" or waiver. These provisions are included in the law to cover the individuals in practice when the law was passed. All or part of the education and examination requirements may be waived for a specified period of time. The expiration date of the waiver is mentioned in the fourth table of newly licensed occupations such as physical therapists, psychologists, and sanitarians.

Other special forms of licensing are for temporary periods, for practitioners from other States, and for foreign-educated persons.

Temporary licenses.—Limited or provisional licenses or permits may be issued for several reasons: (a) until the next board meeting; (b) pending completion of procedures for licensure by examination, endorsement, or reciprocity; (c) pending completion of experience requirements; and (d) for temporary practice within a State to persons licensed out of State. About two-thirds of the States have provisions for temporary licensing of professional nurses and doctors of medicine, and about half the States, for

dentists, practical nurses, physical therapists, osteopaths, and veterinarians.

Licensing practitioners from other States.

—All States have provisions for licensing practitioners from other States. Licensure may be by endorsement, reciprocity, waiver, or examination. The terms—endorsement and reciprocity—appear to be used interchangeably by some of the licensing boards.

In licensing by endorsement the members of the State board in the State where licensing is being sought, determine whether the qualifications of the applicant were equivalent to those required in their State at the time the applicant was initially licensed. Most States also specify that initial licensure must have been by examination which was comparable to theirs. Where the examination is prepared by a national organization and used by all State boards, such as in professional nursing, the procedure of licensing by endorsement is simplified. Each State board sets the passing grade acceptable to it, thus allowing the board to determine comparability of applicants.

In many occupations representatives from different State boards join in preparing a national examination designed for that occupation. For example, tests prepared by the Professional Examination Service of the American Public Health Association are used in several States for many occupations. These national examinations simplify licensing by endorsement in the States that use them.

In several occupations a national examination is prepared by a group of representatives from the occupational associations and experts in the field, such as the National Board of Medical Examiners. Many States will accept certification of the National Board in lieu of their written examination.

In a few occupations experience in the occupation for a specified period of time is an additional requirement. State boards may also require a partial examination.

Another method of licensing practitioners from other States is by reciprocity. In a given occupation, a licensing board in one State will recognize licensees of a second State if the board in the latter State will extend the same recognition to licensees of the former State.

In addition, licensing requirements must be equivalent in the two States before formal or informal reciprocal agreements are made. Applicants for reciprocal licensure must generally meet the same requirements as those seeking licensure by endorsement.

Licensing by reciprocity is common in professions where standards are fairly uniform throughout the nation, as in pharmacy. In pharmacy the National Association of Boards of Pharmacy serves as a centralized agency to process applicants for reciprocal licensure for all States. This greatly simplifies the work of the State licensing boards and is of assistance to the applicant.

Licensure by waiver occurs infrequently. Applicants who do not meet the State board's education or experience requirements may be licensed by waiver if they have other qualifications which are deemed equivalent, such as professional recognition. In these cases, the board may waive education or experience requirements.

There are State boards that only grant licenses by examination. In these States the practitioner seeking a license must meet personal, education, and experience requirements and pass the regular examinations given to new applicants in the State.

foreign-educated Licensing Graduates of Canadian schools normally qualify under the same rules and regulations as graduates of U.S. schools since the quality of education can be readily ascertained in most instances. However, the same situation may not exist with regard to schools in other foreign countries. Hence many State licensing agencies will not license foreign-educated persons until they receive additional training in this country or until they meet special requirements related to citizenship, experience, or other factors. In addition, all States require that applicants satisfy the same qualifications as U.S. educated applicants. Medicine is unique in relying on a voluntary body for certification of credentials of foreign medical graduates. Some States have provisions for licensing foreign-educated applicants by reciprocity or endorsement.

Requirements for the licensing of foreign-trained physicians are presented in table 85.

All State boards have provisions for the licensing of practical nurses and professional nurses; some boards have similar provisions for physical therapists, veterinarians, and a few other health occupations. No State boards provide for the licensing of dental hygienists trained outside the United States.

### **Licensure Statistics**

State licensing agencies should be able to provide annual statistics on the number of licenses renewed, reinstated, and issued on the basis of examination, reciprocity, endorsement, or waiver. The combination corresponds to the total number of licenses issued during the year. These are the statistics provided by the State boards which appear in the last table of each of the succeeding chapters. Reinstatements which are included with renewals in the tables represent late renewals, reinstatements of suspended or revoked licenses, and renewal of formerly inactive licenses.

In order to arrive at the total number of licenses in good standing at the end of the year for each State, it is necessary to subtract those licenses that have been cancelled by death, suspension, or revocation from the total number that were issued during the year.

Individual State reports, when combined for all States, can be used to produce a national estimate of the number of active practitioners, if the individual State boards report, for each license issued, whether the person is residing in the State where he is licensed, and whether he is actively engaged in practice. These two factors will eliminate (a) duplicate licenses—those cases where the same licentiate is counted in more than one State, and (b) persons who are retired or otherwise employed.

Licensing has been used as a source of manpower statistics for more than 20 years, through data submitted to the National Association of Boards of Pharmacy (NABP) by each State pharmacy licensing board. The information compiled on pharmacists is published annually in the NABP Proceedings. Inadequacies in the data reported by the boards have been recognized and have led to the current study of all licensed pharmacists which is being conducted by NABP and financed by the Public Health Service. Similar studies are also under way on several other types of licensed personnel, including dentists, dental hygienists, practical nurses, and professional nurses.

The application form for the renewal of licenses is the technique being used to provide such information as activity status, place of employment, specialization, educational preparation, year of birth, and sex. The resultant statistics will be relatively complete for all persons active at the time of renewal of license to practice.

#### CHAPTER 1

### **ADMINISTRATORS**

### Health Departments, Hospitals, and Nursing Homes

New Jersey is the only State that reported licensing administrators of health departments. To qualify as a health officer an applicant must meet one of the following requirements:

(1) Be a diplomate of the American Board of Preventive Medicine; or (2) hold a master of public health or M.D. degree with 2 years of experience in public health or 1 year with the New Jersey Health Department. If the applicant holds an M.D. degree, a 1-year residency in public health may be substituted for experience; or (3) have a bachelor's degree with courses in public health and 2 years of experience.

Other State laws may specify the qualifications, duties, and powers of an administrator of a health department but no special license is actually required. Licensure or eligibility for licensure to practice medicine in the State is a usual requirement. Other qualifications may include a period of graduate education in public health or acceptable experience.

One State, Minnesota, has supplied information on the licensing of hospital administrators. Minnesota statutes cite that no person shall act as an administrator in the State without first registering with the State Board

of Health. Education and experience required for a "certificate of registration" without limitation as to the size of the hospital to be administered are:

(1) a master's degree in hospital administration with an internship if required by the course; or (2) 2 years of experience as an administrator or assistant administrator of a hospital of 50 beds or more; or (3) 3 years as an administrator of a hospital of 25 beds or more.

Requirements for registration limited to the administration of hospitals under 50 beds or under 25 beds are also specified.

Oregon and Utah have reported State licensing laws for nursing home administrators. Three years of experience or professional education in business administration, medicine, osteopathy, or nursing are required for licensure in Oregon. Utah does not specify education or experience requirements but administers an aptitude test. In other States nursing home licensing laws may set qualifications for the administrator.

Information on licensing administrators of health departments, hospitals, and nursing homes is presented in tables 1-5.

<sup>1</sup> No renewal required.

<sup>Includes sanitary inspectors.
Registrations issued by inspection of credentials.
Includes 96 licenses issued by waiver.</sup> 

#### **CHAPTER 2**

### **CHIROPRACTORS**

Chiropractors are licensed in all States except Louisiana and Mississippi. The first enactment was in 1896, with four-fifths of the States regulating the occupation before 1930. The most recent statutes were enacted in 1963 in New York and in 1966 in Massachusetts (table 6).

Chiropractic boards or examining committees administer or assist in administering these laws in nearly all States. Although most of these boards have three to five members, the number may be as high as nine. Of the 43 boards, 38 limit their membership to chiropractors; 4 have at least two chiropractors, while the District of Columbia board has none. Regular medical boards have the responsibility in six States, with minority representation of chiropractors (table 7).

Renewal of license is required in all jurisdictions except Alaska and Ohio. The renewal is annual in 42 jurisdictions and biennial in 5. Temporary licenses are issued in Alaska, Arkansas, Kansas, North Carolina, and Vir-

ginia. Nineteen jurisdictions may license chiropractors educated in Canada but not in other countries (table 8).

Graduation from an approved chiropractic school with the degree of Doctor of Chiropractic (D.C.) is required in all regulating States. In most States a 4-year course is necessary. In addition, 28 States require 1 or 2 years of college as a prerequisite for entrance into the school of chiropractic. A basic science certificate is mandatory in 24 States (table 9).

Examinations are a universal requirement, with fees ranging from \$20 to \$75. Reciprocity or endorsement fees are from \$25 to \$150; renewal fees, from \$1 to \$25. In South Dakota, renewal fees are collected by the State chiropractic association and deposited in the State board account (table 10).

About 26,000 licenses were in effect in 1965. Renewals account for approximately 90 percent of the total (table 11).

<sup>&</sup>lt;sup>2</sup> Data from the Council of State Chlropractic Examining Boards.

Includes reinstatements.

<sup>4</sup> No renewal required.

Total number of licenses in 1966 was 57 in Alaska; 139 in Connecticut; and 542 in New Hampshire.

<sup>•</sup> Council data adjusted according to questionnaire response.

<sup>&</sup>lt;sup>7</sup> Total number of licenses in 1965 was 852.

# CLINICAL LABORATORY PERSONNEL

At least 14 States have regulations governing one or more types of personnel employed in a clinical laboratory. In those States where laboratory operation is considered within the practice of medicine, physician supervision is required officially (as in the District of Columbia, Louisiana, and Texas) or unofficially (as in New Hampshire, Massachusetts, and Minnesota). Laboratory legislation has been reported to be under consideration in several States. Exemptions from licensure laws may include laboratories in research institutions, those maintained by official government agencies, those within hospital settings, and those operated by private physicians solely for the benefit of their own patients.

In 7 of the 14 States listed in table 12, the laws or regulations governing clinical laboratories specify personnel qualifications. In the balance of these States the personnel are licensed. With the passage of legislation in Nevada and Tennessee in 1967 laboratory directors must now meet specific qualifications in 13 States. These laboratory directors are governed by boards or departments of health in nine States, by the Board of Medical Examiners in New Jersey, and by the Board of Examiners in the Basic Sciences in Florida (table 12). In three States a doctorate is the minimum educational requirement, while in four States a bachelor's degree constitutes the minimum standard. One State, which allows for licensure on the basis of proven ability, sets a minimum educational requirement of a doctorate. Two States specify a master's degree, while the remaining State requires only high school graduation (table 14).

Laboratory personnel other than directors—technicians, technologists, and supervisors—must meet specific qualifications in 10 States. Technologists and/or technicians are governed in nine States and laboratory supervisors in four States. The oldest law, enacted in Alabama in 1936, provides for certification or registration of medical technicians as R.M.T.'s in connection with an approval program for laboratories performing syphilis serology tests under the premarital and prenatal laws.

Laboratory personnel other than directors are governed by boards or departments of health in six States, by the Board of Medical Technician Examiners in Alabama, and by the Board of Examiners in the Basic Sciences in Florida (table 12). Persons with less than 3 years of college and 12 months of specialized training in an approved school of medical technology or a bachelor's degree may be licensed in Alabama, Florida, Illinois, New Jersey, and Pennsylvania (table 15).

Information on board functions and financial practices are available for five States (tables 13 and 16).

<sup>1</sup> Data not available for Nevada and Tennessee.

<sup>2</sup> In all States an M.D. degree may be substituted for educational requirements.

<sup>3</sup> A bachelor's degree and 5 years of experience may be accepted prior to 1968.

4 May substitute D.D.S. In Connecticut and New York a D.V.M. degree may also be substituted. In addition, Connecticut has a provision for licensing on the basis of proven ability.

May substitute a master's degree for 2 years of experience in Hawaii, and for 1 year in New Jersey; Ph.D. for all of experience in Hawaii, and 2 years in New Jersey; D.V.M. degree for 4 years in Hawaii; and an M.D. degree for all experience in Hawaii and New Jersey.

7 An applicant holding a D.Sc., Ph.D., or M.D. degree may substitute certification by a specialty board for all of the experience requirements.

May substitute a master's degree for 1 year of experience, Ph.D., D.Sc., D.D.S., D.V.M., or M.D. for 3 years, or board certification as a

pathologist for all experience. \* May substitute a bachelor's degree for 5 years of experience, a master's degree for 6, or a doctorate for 8 years.

N.J	Public Health laboratory technician	10	(4)		x		

Data not available for New York and Tennessee, and for laboratory director in New Jersey. States which regulate personnel under laboratory licensing laws have been omitted.

<sup>&</sup>lt;sup>2</sup> Must also be certified as an MT(ASCP). B.S. degree may be substituted for educational requirements, or a bachelor's degree in clinical laboratory technique may be substituted for all education and experience requirements. If the college course did not include clinical laboratory work, 6 months of experience are required.

<sup>&</sup>lt;sup>2</sup> Includes fees for application and examination where such fees are applicable.

Reciprocity fee is \$10.

<sup>·</sup> No renewal required.

## **DENTAL HYGIENISTS**

All States and the District of Columbia license dental hygienists under the dental act. About half of the acts were passed prior to 1930 while some were enacted as late as the 1950's (table 17).

Dental licensing boards or committees without dental hygienist representation license this occupation (table 18). The dental boards determine the content of the examination and in 42 States the boards issue initial and renewal licenses; in the remaining States the board recommends issuance to the department. Provisions exist in seven States for the temporary licensing of qualified applicants for employment in a State or philanthropic institution until the next examination. Alabama also issues temporary licenses to dental hygienist trainees. No State board issues licenses to persons educated outside the United States or Canada. Only six States exclude Canadian-trained personnel (table 19).

A high school education or its equivalent and 2 years of a dental hygiene curriculum at the college level are the usual educational requirements but seven States specify only 1 year of dental hygiene school. Allowance for substitution of other training is made in four States. All jurisdictions except Alaska require a written examination. In addition, most States, including Alaska, require a clinical examination (table 20).

Fees for application, examination, and initial license range from \$10 to \$75 and for renewal of license, from \$1 to \$15. Reciprocity or endorsement fees in 20 States are from \$10 to \$50. In two-thirds of the States, fees are deposited in the State board account or a special fund in the State treasury and are used to finance the board. The remaining boards are financed through general revenue appropriations (table 21).

Licenses are renewed annually in 45 States and biennially in 6. Statistics on licensure are presented in table 22.

<sup>1</sup> Data not available for South Carolina, Vermont, and West Virginia.

<sup>2</sup> State residence is not required in any State. A reference attesting to good moral character is required in all States. Physical examination is required in Colorado, Kansas, and Texas.

x = full citizenship. xx = full citizenship or legal declaration of intention.

Schools are those accredited by the Council on Dental Education of the American Dental Association and/or the board.

All States except Arkansas, California, Delaware, Florida, Illinois, Mississippi, Montana, New Jersey, New Mexico, North Carolina, and Wyoming will accept a certificate from the National Board of Dental Examiners in lieu of the written State board examination.

<sup>7</sup> In Alabama 1 year of experience as a dental assistant and 1 year as a dental hygiene trainee may be substituted. In Georgia 2 years of preceptorship training under a State licensed dentist may be substituted. In New Hampshire and Rhode Island graduation from an approved school of nursing may be substituted for all but 3 months of dental hygiene school.

<sup>\*</sup> Part or all of the examination is prepared by the National Board of Dental Examiners.

<sup>•</sup> Upper one-third of the graduates from the School of Dental Hygiene at the University of Michigan and the University of Detroit

<sup>&</sup>lt;sup>1</sup> Includes fees for application and initial license where such fees are applicable.

<sup>2</sup> Of all fees which are deposited in the State treasury, 90 percent in Arizona, Florida, and Oklahoma; 80 percent in Kansas; and 85 percent in Nebraska are used to finance the board.

<sup>3</sup> Biennial renewal.

<sup>4</sup> Fee for examination for out-of-State licensed dental hygienists is \$20.

<sup>•</sup> On November 30 of each year funds in excess of \$500 revert to the general fund.

Licenses in effect for the biennium in Illinois were 566 and in Indiana, 395.
Total number of new licenses issued, including licenses issued by reciprocity or endorsement.</sup> 

## **DENTISTS**

Dentists are licensed in all States and the District of Columbia. Licensing of the profession originated in Alabama in 1841 and by 1900 all but 11 States had enacted statutes (table 23).

Dental boards or committees are composed of 3 to 11 members; the usual membership consists of 5 dentists. In all States except California and Pennsylvania board membership is limited to members of the profession (table 24).

Licenses are issued by the dental boards in 41 States. In most of the remaining jurisdictions the department issues licenses based on the board's recommendation or certification. Provisions for granting temporary licenses to dental interns, teachers, or dentists employed in specific agencies exist in 18 States. Canadian-educated dentists may be licensed in all but five States; licensure of other foreign-educated dentists requires additional training in U.S. dental schools. All jurisdictions have the power to revoke or suspend licenses; the board has this function in 41 States (table 25).

A minimum of 6 years of education beyond high school is required for licensure in all States except Washington. In Washington, only 1 year of college is specified, but at least 2 years of college is an admission requirement to the 4-year dental program leading to the D.D.S. or D.M.D. degree. A basic science certificate is required for dental licensure in seven States. Written and practical examinations are required of applicants for initial licensure in all States; oral examinations in 24 States. A certificate from the National Board of Dental Examiners is accepted in lieu of the written examination in 40 jurisdictions (table 26).

Fees for application, examination, and initial license range from \$25 to \$100. Fees for renewal of licenses are from \$1 to \$30 and for licensure by reciprocity or endorsement, from \$25 to \$100. About one-third of the State licensing boards are financed through a State board account, one-third through a special fund in the State treasury, and one-third through the State general revenue fund (table 27).

Annual renewal of license is required in all but seven States where the renewal period is biennial. Licensure statistics are presented in table 28.

<sup>&</sup>lt;sup>1</sup> All States except Arkansas, Hawaii, Indiana, Ohio, and Utah issue licenses to graduates of accredited Canadian schools. No State board issues licenses to other foreign-educated dentists without additional training in U.S. schools.

<sup>&</sup>lt;sup>2</sup> Renewals are annual unless otherwise specified.

<sup>\*</sup> Temporary or limited licenses or permits are issued to:

A-Dental interns.

B—Teachers in approved dental schools.

C-Dentists employed by State or county agencies.

D—Dentists practicing in charitable or social organizations.

E—Dentists employed in State registered hospitals, dispensaries, or infirmaries.

<sup>4</sup> Excludes grace period.

Biennial, even years. In Alaska and New Hampshire renewal is biennial but whether even or odd years was not reported.

<sup>•</sup> The board or committee recommends to the department which has this function. In Connecticut the Department of Health issues licenses.

<sup>7</sup> The hearing officer in Maine and the Supreme Court of the District of Columbia have this function.

<sup>•</sup> Clerk of the Circuit Court in county of residence issues a license based on the certificate issued by the board.

Biennial, odd years.

<sup>• 2,957</sup> licenses were in effect for the biennium.

## PROFESSIONAL ENGINEERS

All States have enacted statutes for the licensing of professional engineers. The laws vary in coverage and usually do not provide for identification of specialties within the broad field of engineering. The lists of licensed engineers available from the State boards seldom identify sanitary engineers or others engaged in environmental health activities.

About two-thirds of the States provided the detailed information requested on the questionnaire. Information on nonresponse States was obtained from other sources whenever possible.

The laws date from 1907 in Wyoming to 1950 in the District of Columbia. Oklahoma and Wyoming are the only States that have optional registration laws which protect the use of the title (table 29). Licensing boards are usually composed entirely of professional engineers; some may include land surveyors and/or architects (table 30). Functions of these State boards include issuance, suspension, and revocation of licenses. Some of the boards issue temporary or provisional licenses to engineers licensed out of State until application procedures are completed or for temporary practice within the State. Other boards grant exemptions for temporary practice not exceeding 30 to 60 days (table 31).

Eight years of experience, or education and experience combined, are the usual requirements for licensure as a professional engineer. A 4-year engineering program approved by the Engineer's Council for Professional Development and 4 years of experience as an engineer-in-training satisfy qualifications for licensure. Graduate education in engineering may be substituted for 1 additional year of experience in some States. Credit for undergraduate education in other fields is given in a number of States, where completion of a 4-year college program is accepted in lieu of 2 years of experience. Applicants qualifying for licensure on the basis of 8 years of experience must pass the professional engineering examination. The examination may be waived for applicants who hold a bachelor's degree in engineering and have 4 years of experience, or for applicants who have 12 or more years of experience (table 32).

Fees for application, examination, and initial license are from \$15 to \$70; renewal fees range from \$2 to \$20. Fees for reciprocity or endorsement are from \$10 to \$50 (table 33).

The statistics in table 34 may include land surveyors and/or architects. Only two States provided counts of licenses issued to sanitary engineers.

<sup>1</sup> Data not available for other licensing States.

<sup>2</sup> State residence is required in Alaska, Idaho, Michigan, New Hampshire, and Tennessee. A reference attesting to good moral character is required in all States. Physical examination is not required in any State.

3 May waive examination if applicant has a bachelor's degree in engineering and 4 years of experience in Alabama, Delaware, Georgia, Maryland, Massachusetts, Mississippi, and Texas, or 3 years of experience in Oklahoma.

+x = full citizenship. xx = full citizenship or legal declaration of intention.

In Delaware, Georgia, Maryland, Massachusetts, Mississippi, New Hampshire, and New Jersey the board may waive the examination if the applicant is at least 35 years of age and has 12 years of experience (15 years in New Jersey) acceptable to the board. In Connecticut the applicant must be 50 years of age with 20 years of experience. Arkansas, the District of Columbia, and Montana require 12 years and Wyoming requires 20 years of experience with no minimum age specified.

Includes interview.

7 May substitute a maximum of 5 years of engineering school for all but 3 years of experience.

Part or all of the examination is prepared by the National Council of State Boards of Engineering Examiners.

9 May substitute 4 years of engineering school for 4 years of experience.

10 May substitute 4 years of engineering school for 5 years of experience in Oklahoma; 6 years in Florida and North Carolina; and 8 years in Maine, New York, and Pennsylvania.

<sup>1</sup> Data not available for other licensing States.

<sup>&</sup>lt;sup>2</sup> Includes reinstatements.

Includes initial licenses issued by examination or inspection of credentials where examination is waived; and licenses issued by reciprocity or endorsement.

<sup>4</sup> Total number of licenses in effect in 1965 are as shown except for Massachusetts with 18,016 and New York with 22,738.

Statistics shown include land surveyors and/or architects.

<sup>•</sup> Fiscal year data.

<sup>&</sup>lt;sup>7</sup> Approximately 59 are sanitary engineers.

Data not available for all engineers. The total number of licenses in effect for sanitary engineers in 1965 was 29.

## **MIDWIVES**

Twenty-three States and the District of Columbia have licensing or registration laws for lay midwives. At least eight States issue work permits or provide other means for control of midwifery practice. Four States (and New York City) have licensing laws for nurse midwives. The tables in this chapter have information on the laws and regulations for lay midwives only.

Of the 23 States that have licensing or registration laws for lay midwives, 5 no longer issue new licenses although they continue to renew those already in existence. These States are Arizona, California, Colorado, Connecticut, and Illinois. Ohio and Wyoming have not issued any licenses for 20 years and did not provide data on requirements. On the other hand, Washington State, which has not issued any licenses for 32 years, did provide data. Louisiana provided two sets of information—one for Orleans Parish and the other for the balance of the State. North Carolina provided data for Pitt County as representative of all counties in that State. In North Carolina regulation of midwives is administered at the county level.

The State laws were enacted between 1891 and 1957. The administering agency is usually the State department of health or board of medical examiners (table 35). In no State is there a requirement that midwives be members of the board.

Regulations pertaining to this occupation cover examination, initial license, and renewal. In some States the examination is conducted locally (table 36). The renewal period is annual in 11 States and the District of Columbia and biennial in 2 States, while 2 have no renewal provisions (table 39).

Completion of a midwifery course is specified in most licensing States. Attendance at midwifery courses or conferences is also required for renewal of the license in Florida, New Mexico, North Carolina, and West Virginia. Endorsement by a registered physician is an additional qualification in some States,

New Jersey, for example. A written examination is not required in Delaware, Florida, North Carolina (Pitt County), or West Virginia (table 37).

Examination fees are as high as the \$35 charged in the District of Columbia; renewal fees, as high as the \$10 charged in Indiana. A reciprocity fee of \$50 is charged in the District of Columbia (table 38).

The total number of midwives has been decreasing. In 1965, fewer than 5,000 midwives could be enumerated through licenses (including registrations and certificates) and work permits. The following data are summarized from the accompanying table 39 and from PHS Publication Number 1509.1

<sup>&</sup>lt;sup>1</sup> Includes reinstatements.

<sup>&</sup>lt;sup>2</sup> Includes initial licenses issued by examination and inspection of credentials.

<sup>\*</sup>Total number of licenses in 1965 was 1 in Indiana, and 486 in Virginia.

<sup>4</sup> There are an additional 185 unlicensed persons instructed and supervised by local health units for emergency service.

Total number of licensed midwives in North Carolina in 1966 was 107.

Renewal not required. In Virginia renewals are issued on request.

<sup>7</sup> No licenses have been issued for 32 years.

## **NATUROPATHS**

Naturopaths are specifically licensed in at least five States and the District of Columbia (table 40). The absence of a State from this list does not imply that there are no licensed naturopaths. In Illinois, for example, naturopaths could be covered by the medical practice act. Texas and Virginia laws provide for naturopaths on examining boards but no information is available on licensing practices. Elsewhere licensing powers have been abolished and no new licenses are being issued; for example, in 1965 naturopathic licenses renewed in California numbered 66 and in Florida, 136.

In addition to Doctors of Naturopathy (N.D.) there are other limited branches of medicine; these have not been included in this study. In the State of Washington the Drugless Therapeutics Examining Committee functions in four separate and coordinate systems: food science, mechano-therapy, suggestive therapeutics, and physcultopathy. The Ohio law states which branches are to be specified on certificates issued by the State Medical Board to limited practitioners. No attempt has been made to collect information on these drugless healers who are few in number.

All six of the licensing boards or committees for naturopathy are composed of three members of that occupation (table 40). These agencies or the departments to which they are attached give the examination prior to the issuance of the initial license and have powers of license suspension or revocation (table 41). License renewal is annual except in Connecticut where it is biennial.

All States require 4,500 hours of classroom instruction or 4 years' attendance at an approved school of naturopathy. These schools are subject to inspection and approval by the licensing board or committee. In four of the six States 2 years of college are required prior to the naturopathic schooling. Half of the States require 1 year of internship or apprenticeship (table 42).

Successful completion of a written examination is required in all licensing jurisdictions. Fees for the application, examination, and initial license range from \$25 to \$75 while fees for renewal licenses are from \$4 to \$10 (table 43).

Table 40. DATE OF FIRST ENACTMENT, NATURE, AND ADMINISTRATION OF STATE LICENSING STATUTES FOR NATUROPATHS

<sup>2</sup> Of all fees which are deposited in the State treasury, 90 percent in Arizona and Oregon are used to finance the board.

<sup>3</sup> Biennial renewal.

#### **CHAPTER 9**

## PRACTICAL NURSES

Practical nurses (L.P.N.) are licensed in 48 States and the District of Columbia, and vocational nurses (L.V.N.) in California and Texas. In 22 States and D.C. the law is voluntary, protecting the title; in the other States the law is compulsory, regulating practice.

Although the first State law was enacted in 1913, the majority of the laws were passed after 1945 (table 44).

The licensing agency is a board of practical nurse examiners in 7 States and the District of Columbia, while the board of nursing functions in the other 43 States. In 19 instances the boards contain no L.P.N. members (table 45).

All States renew licenses and have provisions for licensing foreign-educated applicants. In addition about half of the boards issue temporary licenses. In six States the department acting on the board's recommendation issues licenses (table 46).

With the exception of 16 States a minimum age requirement of 18 to 20 years must be met. High school graduation is also required in six States. Waiver of the educational requirements, which involve from 9 to 15 months of vocational training, is no longer permitted in most States. Applicants must also pass a written examination (table 47).

The fee for application, examination, and

initial license is usually \$15 but may vary from \$5 to \$30. Renewal fees are frequently from \$2 to \$5. The boards are financed by fees deposited in State board accounts in 12 States and in special funds in the State treasury in 22 States. Financing through the general revenue fund in the other 17 States is usually limited to the amount of fees collected (table 48).

As of 1966 licenses are renewed biennially in 12 States, and annually in all others (table 49). In the renewal period ending in 1965 approximately 350,000 licenses were issued to practical nurses. About 282,000 practical nurses were employed in January 1966 according to a U.S. Public Health Service estimate.

In addition to practical nurses California licenses "certified psychiatric technicians". Employment in a psychiatric nursing unit for 2 years may be substituted for the required 1 year of vocational training.

Michigan also licenses psychiatric attendant nurses and trained attendants. No information is available on requirements for the latter group. For licensure as a licensed psychiatric attendant nurse (L.P.A.N.) the applicant must have completed the eighth grade and a 9-month course in an approved school or training program.

<sup>&</sup>lt;sup>1</sup> In all States except California, Colorado, District of Columbia, Georgia, Louisiana, Texas, Washington, and West Virginia the board also licenses professional nurses.

<sup>2</sup> For purposes of licensing practical nurses the board is composed of 3 regular R.N. members.

4 The Department of Health provides clerical and fiscal services.

• 1 L.P.N., 1 M.D. and 1 hospital administrator are added to the board:

A 3-member committee including 2 L.P.N.'s appointed by the board assists in establishing rules and regulations.

The board also licenses certified psychiatric technicians in California, psychiatric attendant nurses and trained attendants in Michigan, and tuberculosis nurses in Virginia.

The Advisory Council of Licensed Practical Nurses, composed of 3 L.P.N.'s, is responsible for consulting with the board and advising on matters relating to education and discipline of practical nurses.

Licensure by examination is the function of the Committee of Examiners for Trained Practical Nurses, a statutory committee appointed by the board. The State Department of Nurses serves as the administrative agency.

<sup>&</sup>lt;sup>1</sup> Renewals are annual unless otherwise specified.

<sup>&</sup>lt;sup>2</sup> Temporary licenses or permits are issued to qualified applicants pending examination or completion of endorsement procedures. In Connecticut temporary permits are issued to persons licensed in another State for temporary practice within State.

Excludes grace period.

The board or committee recommends to the department which has this function. In Connecticut the Department of Health is responsible for

The Supreme Court of the District of Columbia, the district court of the county in which the licentiate resides in Iowa, and the Administrative issuing license renewals. Hearing Commissioner in Maine have this function.

<sup>&</sup>lt;sup>7</sup> Biennial, odd years. No information is available on the renewal year for North Carolina.

<sup>\*</sup> This is the function of the Committee of Examiners for

<sup>1</sup> State residence is required in Arkansas. A reference attesting to good moral character is required in all States. A statement of good health is required in Arkansas, Colorado, District of Columbia, Florida, Hawaii, Idaho, New Mexico, Oklahoma, Texas, Utah, and Washington.

 $^{2}$  x = full citizenship. xx = full citizenship or legal declaration of intention.

\* Written test required in all States is prepared through the American Nurses' Association (ANA) Council of State Boards of Nursing and the National League for Nursing (NLN) Test Construction Unit and Evaluation Service.

\* Academic year.

Based on 4 years of high school.

Programs are those approved by the board. In Alabama, Arizona, Florida, Hawaii, Maine, Massachusetts, Texas, Wisconsin, and Wyoming study in a professional nursing school may be substituted if the applicant has successfully completed theory and experience in medical, surgical, pediatric, and obstetrical nursing.

Completion of 8th grade is required if applicant is over 25 years of age in Arizona, Kansas, and Louisiana, and over 40 in Nebraska; and 2 years of high school if applicant is over 20 years of age in Connecticut, and over 25 in Kentucky.

<sup>•</sup> Limitations upon practice until age 19.

<sup>&</sup>lt;sup>1</sup> Data from American Nurses' Association, Research and Statistics Unit.

4 Biennial renewal provision became effective in 1966.

<sup>&</sup>lt;sup>2</sup> Includes reinstatements.

<sup>&</sup>lt;sup>3</sup> Total number of licenses issued for the 2-year period ending in 1965 was 21,659 in California; 4,108 in Connecticut; 12,012 in Florida; 967 in Newada; 1,493 in New Hampshire; 1,898 in New Mexico; 54,272 in New York; 2,918 in Oregon; and 24,420 in Pennsylvania.

## PROFESSIONAL NURSES

All States license professional nurses under the title of "registered nurse" (R.N.). In eight States and the District of Columbia only the title is protected; in the remaining States the practice of nursing is regulated.

The earliest State law was enacted in 1903, with half of the States passing statutes prior to 1910. By 1920 all but three States had licensing laws (table 50).

Usually the law is administered by a board which functions independently. The number of board members ranges from 3 to 15, with half of the boards consisting of 5 members. The board is composed exclusively of R.N.'s in 33 States and the District of Columbia (table 51).

All State boards issue initial and renewal licenses and have provisions for licensing foreign-educated applicants. About two-thirds of the boards issue temporary licenses to qualified applicants pending examination or completion of endorsement procedures. In six States the department issues, revokes, or suspends licenses on the board's recommendation (table 52).

The minimum period of education beyond high school is 28 to 36 months in the District of Columbia, Georgia, and Wisconsin and 2 years in 31 States. In the remaining 17 States there is no minimum period, but curriculum requirements are specified. There are three basic programs of professional nursing education: the 3-year diploma program, 2-year associate degree, and the 4- or 5-year program leading to a baccalaureate. All States require successful completion of a written examination for initial licensure (table 53).

Fees charged for application, examination, and initial license range from \$10 to \$45, with approximately four-fifths of the States charging between \$15 and \$25. Renewal fees range from \$1 to \$10. The boards are financed by fees deposited in State board accounts in 13 States and in special funds in the State treasury in 21 States. Financing through general revenue funds in the other 17 States is usually limited to the amount of fees collected (table 54).

As of 1966 12 States have biennial renewal of licenses, while all others are annual (table 55). Licenses issued to professional nurses in the renewal period ending in 1965 totalled about 1,170,000. There were an estimated 621,000 nurses in practice in January, 1966 according to the Interagency Conference on Nursing Statistics. The number of nurses not employed in their profession is unknown.

<sup>1</sup> Compulsory (C) = Only persons holding a license are permitted to practice the occupation, and unlicensed persons are prohibited from working in the field. Some laws and regulations do include exceptions which may invalidate compulsory provisions.

Voluntary (V) = Only persons holding a license are authorized to use a particular title or official designation; unlicensed persons are not prohibited from working in this field, but way not use the protected title.

<sup>&</sup>lt;sup>1</sup> In all States, except California, Colorado, District of Columbia, Georgia, Louisiana, Texas, Washington, and West Virginia, the board also

licenses practical nurses. <sup>2</sup> The Department of Health provides clerical and fiscal services.

4 Excludes members of the board who serve only on matters related to practical nursing.

The board also licenses undergraduate nurses in Georgia, psychiatric attendant nurses and trained attendants in Michigan, and tuberculosis nurses in Virginia.

Licensure by examination is the responsibility of the Committee of Examiners for Nurses, a statutory committee of 5 registered nurses appointed by the board. The State Department of Nurses serves as the administrative agency.

<sup>&</sup>lt;sup>2</sup> Temporary or limited licenses or permits are issued to qualified applicants pending examination or completion of endorsement procedures. In Alabama, Connecticut, and Texas temporary permits are issued to persons licensed in another State for temporary practice within State.

Excludes grace period.

<sup>&</sup>lt;sup>5</sup> The board or committee recommends to the department which has this function. In Connecticut the Department of Health is responsible for issuing license renewals.

<sup>&</sup>lt;sup>7</sup> The Supreme Court of the District of Columbia, the district court of the county in which the licentiate resides in Iowa, the Administrative Hearing Commissioner in Maine, and the court in the county where the original certificate is recorded in Texas have this function.

<sup>8</sup> Biennial, odd years. No information is available on the renewal year for North Carolina.

This is the function of the Committee of Examiners for Nurses.

<sup>&</sup>lt;sup>1</sup> Data from American Nurses' Association, Research and Statistics Unit.

<sup>&</sup>lt;sup>2</sup> Includes reinstatements.

Total number of licenses issued for the 2-year period ending in 1965 was 125,449 in California; 20,333 in Connecticut; 31,842 in Florida; 22,945 in Indiana; 16,007 in Maryland; 6,933 in New Hampshire; and 110,130 in Pennsylvania.

<sup>4</sup> Includes 2 licenses issued by waiver. Total number of licenses issued for the 2-year period was 2,036.

<sup>&</sup>lt;sup>5</sup> Biennial renewal provision became effective in 1966 in North Carolina and 1965 in Oregon.

<sup>•</sup> Includes 74 licenses issued by waiver.

#### **CHAPTER 11**

## **OPTICIANS**

Dispensing opticians are required to be licensed in 15 States. In addition, California and Hawaii license individuals and firms to engage in the occupation of a dispensing optician. Licenses issued to optical technicians in retail optical shops or to retail optical establishments are not discussed in this report.

The first State law was enacted in 1935 with the majority of the statutes being passed in the 1950's. All laws are compulsory (table 56).

Specific boards or committees for the licensing of opticians exist in 14 States. In 10 of these States membership is limited to opticians. In California, Rhode Island, and South Carolina no opticians serve on the licensing boards (table 56).

In all but four of the licensing States the State board issues initial and renewal licenses. Temporary licenses are issued in Kentucky and New Jersey to persons initially licensed in another State pending examination results or completion of experience requirements (table 57).

Apprenticeship or graduation from an approved course in opticianry is required in most licensing States. Six States also specify high school graduation. Qualifications for initial licensure usually include successful completion of written, oral, and practical examinations (table 58).

Fees for application, examination, and initial license are from \$25 to \$100 and for renewal of license, from \$5 to \$50. Fees in the eight States that license by reciprocity or endorsement are from \$10 to \$50 (table 59).

The renewal period is biennial in three States and annual in the others. Information on the numbers of licenses issued in 1964 and in 1965 is given in table 60.

<sup>1</sup> Compulsory (C) = only persons holding a license are permitted to practice the occupation, and unlicensed persons are prohibited from working in the field. Some laws and regulations do include exceptions which may invalidate the compulsory provisions.

<sup>&</sup>lt;sup>2</sup> Licenses individuals and firms to engage in the occupation of a dispensing optician.

For other occupations licensed by the board see table 82.

The Department of Health provides clerical and fiscal services. The Commission of Opticians also licenses assistant licensed opticians, mechanical opticians, and assistant mechanical opticians.

<sup>&</sup>lt;sup>5</sup> Also licenses ophthalmic technicians.

Also licenses optometrists.

<sup>7</sup> This board is the certifying agency for the State Licensing Board for the Healing Arts.

<sup>1</sup> Data not available for South Carolina. <sup>2</sup> Massachusetts, New Jersey, New York, and Tennessee have provisions for licensing foreign-educated opticians.

<sup>4</sup> Temporary licenses or permits are issued to persons initially licensed in another State pending examination results or completion of experience requirements.

<sup>\*</sup> Excludes grace period.

Biennial, even years.

The board or committee recommends to the department which has this function. In Tennessee the State Licensing Board for the Healing Arts issues licenses.

ERIC

Hawaii: Individuals in charge of and responsible for the direct management of the business.

<sup>&</sup>lt;sup>2</sup> State residence is not required in any State. A reference attesting to good moral character is required in all States. Physical examination is required in Connecticut.

<sup>&</sup>lt;sup>3</sup> Arizona, Georgia, New York, Rhode Island, Virginia, and Washington require high school graduation or equivalent. 5 years of experience may be substituted for school or apprenticeship requirements in California, North Carolina, and Washington.

<sup>4</sup>x = full citizenship. xx = full citizenship or legal declaration of intention.

<sup>&</sup>lt;sup>1</sup> Schools are those approved by the board. Apprenticeship may be substituted for school requirements as follows: New York, 1 year; Florida, Georgia, and Kentucky, 2 years; Massachusetts, Tennessee, and Washington, 3 years; and Nevada, 4 years.

Completion of an approved course in opticianry may be substituted for 1 year of apprenticeship in Arizona and Virginia.

<sup>7</sup> Includes interview.

<sup>\*</sup> When licensing firms, these requirements apply to:

California: Individuals in charge of or who manage dispensing operations, and those with proprietary interest in the firm who are engaged in dispensing operations.

<sup>&</sup>lt;sup>1</sup> Data not available for South Carolina. Data are omitted for California and Hawaii since licenses are issued to individuals and/or firms.

<sup>&</sup>lt;sup>2</sup> Includes reinstatements.

<sup>&</sup>lt;sup>3</sup> Total number of licenses in effect in 1965 was 1,007 in Massachusetts and 2,275 in New York.

#### **CHAPTER 12**

### **OPTOMETRISTS**

All States license optometrists. First enactment dates range from 1901 in Minnesota to 1939 in Wyoming (table 61).

In each jurisdiction there is an optometric board or committee, which is usually composed of three or five members, all of whom are optometrists. Only in California is there a representative of the public serving on the licensing body (table 62).

In all but 10 States the optometric board or committee issues initial and renewal licenses. In nine States licenses are issued by the department on the recommendation of the board while in the remaining State the Healing Arts Board has this function. In at least three States temporary licenses are issued to interns. Nineteen States provide for licensure of persons educated outside of the United States (table 63).

An applicant must be a graduate of an approved school with a program leading to a Doctor of Optometry degree (O.D.). Pre-

optometry schooling at an approved college and professional optometry training must total at least 6 years in 14 States; 5 years in 26 States; and 3 or 4 years in the remaining 11 States (table 64). At present approved educational programs in the United States requires at least 1 year of preprofessional and 4 years of professional school.

Examinations are provided for in all States, with fees for examination, application, and initial license ranging from \$15 to \$100 (table 65).

Most States grant licensure by reciprocity or endorsement of equivalent credentials. Additional requirements in several States include completion of a special examination, or a specified period of practice in the prior licensing State. Fees range from \$20 to \$150.

Annual renewal with fees of \$1 to \$60 is required in all but four States. Licensure statistics for six States are not included in table 66.

<sup>&</sup>lt;sup>1</sup> Data not available for other licensing States.

<sup>&</sup>lt;sup>2</sup> Includes reinstatements.

Total number of licenses in effect in 1965 was 640 in Indiana and 2,125 in New York.

## **PHARMACISTS**

Pharmacists are members of one of the earliest occupations to be licensed, with 43 out of 51 statutes antedating 1900. Licensing is compulsory in all States and the District of Columbia (table 67).

Two-thirds (33) of the licensing boards have no affiliation with a department of State government. Some 36 boards of pharmacy have 5 members each but boards may range in size from 3 to 19 members. With the exception of one member in California, all persons must be licensed pharmacists (table 68).

In every State the board recommends or issues a license after a successful examination or review of credentials forwarded by the National Association of Boards of Pharmacy. This association acts as the intermediary for licensure by reciprocity. Board functions also include renewal, suspension, and/or revocation of licenses as indicated in table 69. Temporary licenses or permits are issued in 18 States. Seven States license persons educated outside of the United States. Annual renewal of license or registration is required in all except nine States—eight of whom have biennial renewal and one, triennial.

Initial licensure of pharmacists requires a minimum of 5 years of professional education, of which the last 3 or 4 must be in an accredited college of pharmacy. Applicants must have had at least 1 year of experience, except in Alaska, Indiana, New York, and Rhode Island. Written and practical examinations are required in all States and oral examinations in 32 States (table 70).

Fees for examination and initial license range from \$10 to \$65; 22 States charge \$25. Fees for license renewal range from \$3 to \$20 but are usually \$5 or \$10. In 12 States the board is financed from fees deposited in the State board account and in 18 States from a special account in the State treasury. In the remaining States the boards are financed by appropriations from the general revenue fund (table 71).

Total licenses in effect in 1966 numbered about 172,000 according to the statistics presented in table 72.

Assistant pharmacists are licensed in 28 States as shown in table 73. No new licenses are issued but existing ones are renewed.

<sup>&</sup>lt;sup>1</sup> Renewals are annual unless otherwise specified.

ERIC Full Text Provided by ERIC

<sup>&</sup>lt;sup>9</sup> Triennial from date of issuance.

<sup>&</sup>lt;sup>2</sup> Temporary licenses or permits are issued to qualified applicants pending examination or completion of reciprocity procedures. In Florida, temporary permits are issued to interns.

Excludes grace period.

Licenses are issued only after review of foreign transcripts by a dean of a recognized school of pharmacy and his statement that such training is equivalent to the standards of the recognized school of pharmacy.

Biennial, odd years.

<sup>•</sup> The board or committee recommends to the department which has this function.

<sup>&</sup>lt;sup>7</sup> Biennial, even years. In Washington, A-L even years and M-Z odd years.

Licenses are issued only to graduates of the University of Havana who meet all other requirements for licensure.

State residence of 1 year is required in Hawaii and 90 days in Utah. A reference attesting to good moral character is required in all States. Physical examination is required in New Jersey and South Dakota.

x = full citizenship. xx = full citizenship or legal declaration of intention.

The 3-or 4-year pharmacy program must be completed in a school accredited by the American Council of Pharmaceutical Education. The only exception is Hampden College of Pharmacy, Williamansett, Massachusetts, whose graduates are accepted for licensure only in Massachusetts. Includes experience gained while a student and following graduation. Experience may not be concurrent with school attendance.

<sup>•</sup> Includes interview.

Part or all of the written examination is prepared by the Professional Examination Service of the American Public Health Association.

No examination is required for graduates of the University of Mississippi.

<sup>&</sup>lt;sup>1</sup> Includes fees for application and initial license where such fees are applicable.

column and the continue

<sup>&</sup>lt;sup>2</sup> Excludes \$50 fee paid to the National Association of Boards of Pharmacy for application for reciprocal licensure.

<sup>3</sup> Nonresident examination fee is \$50.

Of all fees which are deposited in the State treasury, 90 percent in Arizona, Colorado, and Oregon; 80 percent in Kansas; and 85 percent in Nebraska are used to finance the board.

Biennial renewal.

<sup>•</sup> Triennial renewal.

<sup>7</sup> Includes a \$1 identification fee.

Same fee as the reciprocating State charges

Data from the National Association of Boards of Pharmacy.

The total number of licenses in 1966 was 12,600 in California; 2,659 in Maryland; 6,475 in Massachusetts; 18,403 in New York; 8,095 in Ohio; and 3,512 in Washington.

The State reports that the difference between total number of licenses issued in 1965 and the number of renewals in 1966 is the result of improved methods of determination.

Data not available on the number of licensed practical druggists in Arkansas.
 Data from the National Association of Boards of Pharmacy.
 May include some assistant pharmacists not in practice.
 No licenses renewed after 1965.

### PHYSICAL THERAPISTS

Physical therapists are licensed in all States except Missouri and Texas. In California a distinction is made between a licensed (L.P.T.) and a registered (R.P.T.) physical therapist. Registration is voluntary in 10 States, protecting only the title. The earliest statutes were enacted in 1913 in Pennsylvania and in 1926 in New York, with the majority of the statutes dating after 1950 (table 74).

Physical therapy boards administer the licensing laws in 23 States. Membership is limited to physical therapists in 15 of these States. In 24 States where the medical board is responsible for licensure there are physical therapist committees, representatives, or consultants available to the board in all but two instances. In Hawaii the Department of Health has a physical therapy advisory committee. Information is not available on the 1966 law in Mississippi (table 75).

All States issue initial and renewal licenses. In 22 States there are provisions for temporary licenses, usually for qualified applicants until the next board meeting or examination. In 39 States, there are provi-

sions for licensing foreign-educated applicants (table 76).

All States specify professional qualifications in physical therapy. The three usual plans of education are: a 4-year course in physical therapy leading to a bachelor's degree, a 1-year certificate course for students who hold a bachelor's degree in some field other than physical therapy, and a 2-year graduate program leading to a master's degree for students with a bachelor's degree and the requisite background. All plans have a minimum of 4 months of clinical education.

Examinations are required for applicants in all States, except Hawaii, New Jersey, and New Mexico. Some of the States will accept certification of the American Registry of Physical Therapists in lieu of the written examination (table 77).

Examination fees range from \$15 to \$55 and renewal fees from \$1 to \$30. Reciprocity or endorsement fees vary from \$10 to \$100 (table 78).

Licenses are issued annually in 39 States, biennially in 6, and triennially in 3. Information on licenses issued in 1965 is reported in table 79.

<sup>&</sup>lt;sup>1</sup> Compulsory (C) = only persons holding a license are permitted to practice the occupation, and unlicensed persons are prohibited from working in the field. Some laws and regulations do include exceptions which may invalidate compulsory provisions.

Voluntary (V) = only persons holding a license are authorized to use a particular title or official designation; unlicensed persons are not prohibited from working in this field, but they may not use the protected title.

<sup>&</sup>lt;sup>2</sup> The difference in the limitations of the 2 licenses is that the registered physical therapist (R.P.T.) must work under the supervision and direction of a physician, while the licensed physical therapist (L.P.T.) is only prohited from diagnosing.

<sup>1</sup> Data not available for Mississippi.

<sup>2</sup> State residence is not required in any State. A reference attesting to good moral character is required in all States except Florida, Hawaii, and Maryland. Physical examination is required in the District of Columbia.

x = full citizenship. xx = full citizenship or legal declaration of intention. 4 Physical therapy programs are approved jointly by the American Physical Therapy Association (A.P.T.A.) and the Council on Medical Education of the American Medical Association. Requirements refer to licensure other than under "grandfather" or waiver provisions. These provisions expired in 1965 in Illinois, and 1966 in Oregon and West Virginia.

In all States except Arkansas, Indiana, Louisiana, Minnesota, Ohio, and Wisconsin part or all of the written examination is prepared by the Professional Examination Service of the American Public Health Association.

6 Includes interview.

<sup>7</sup> L.P.T. = licensed physical therapist.

In California, Oregon, and Utah graduation from an approved nursing or physical education program plus 1 year of physical therapy school may be substituted.

• Accepts certification from the American Registry of Physical Therapists (A.R.P.T.) in lieu of written examination.

Licenses are issued on the basis of inspection of credentials. Hawaii will license members of A.P.T.A. or the A.R.P.T. on the basis of membership.

A second second

<sup>&</sup>lt;sup>1</sup> Data not available for other licensing states.

<sup>&</sup>lt;sup>2</sup> Includes reinstatements.

Total number of licenses in 1965 was 141 in Arizona; 1,087 L.P.T. and 2,352 R.P.T. in California; 761 in Connecticut; and 236 in Indiana.

<sup>4</sup> L.P.T. - licensed physical therapist.

R.P.T. = registered physical therapist.

Includes licenses issued by reciprocity or endorsement. Also includes reinstatements in 1965 in Illinois.

All licenses are issued on basis of inspection of credentials.

<sup>&</sup>lt;sup>7</sup> First renewal in 1965.

Total number of licenses in 1964 was 365 which includes 59 licenses issued by waiver.

### PHYSICIANS (M.D.)

Doctors of Medicine (M.D.) are licensed in all States and the District of Columbia. This profession is among the earliest for which laws were enacted, with 42 of the 51 jurisdictions having licensing laws prior to 1900 (table 80).

Medical licensing boards or committees composed entirely of M.D.'s administer the acts in 25 States. These licensing bodies have from 3 to 10 members. In the remaining 26 jurisdictions where the licensing bodies have 4 to 16 members, physicians are in the majority, with the exception of Kansas. Representatives of other healing arts and of the public range from one to six persons (table 81).

In 12 States, the board licenses no other occupation. In the remaining 39 jurisdictions, other occupations licensed by the State boards for licensure of physicians—sometimes with the addition of representatives of other healing arts—include osteopathic physicians, 26 States; physical therapists, 23 States; podiatrists, 16 States; midwives, 9 States; chiropractors, 6 States; psychologists, 2 States; and dispensing opticians, 1 State (table 82).

The board is responsible for examinations in all States and for issuance of licenses in 38 States. Renewals are required in all but five States. Provisions for temporary licenses exist in 39 States and for licensure of foreign-educated physicians in 48 States (table 83).

Qualifications for the licensure of physicians educated in the United States or Canada include graduation from an approved medical school in all States and an internship in 33 jurisdictions. In addition, 4 years of preprofessional education are required in 10 States; 3 years in 2; and 2 years in the remaining 39 States. Half of the States also require a basic science certificate (table 84).

Qualifications for the licensure of physicians educated in foreign medical facilities are listed in table 85. Of the 48 States which license these physicians, 41 specify certification by the Educational Council for Foreign Medical Graduates.

Examination fees range from \$20 to \$100; renewal fees, from \$2 to \$20. All States except Florida have provisions for licensing by reciprocity or endorsement with fees ranging from \$40 to \$200 (table 86).

Annual renewal of licenses is required in 34 jurisdictions, biennial in 11, and triennial in 1. Licenses are not renewed in Kentucky, Massachusetts, Mississippi, New Jersey, and Ohio. Statistics are available on the number of licenses granted by examination, reciprocity, or endorsement. Only a few States provided data on numbers of licenses renewed (table 87).

<sup>1</sup> Renewals are annual unless otherwise specified.

<sup>&</sup>lt;sup>2</sup> Temporary or limited licenses or permits are issued:

A-to qualified applicants until next board meeting.

B-to physicians for specific employment such as State institutions, camps, etc.

C-for locum tenens practice.

D-in a community or public emergency.

E-to interns, residents or fellows.

F-to qualified applicants until citizenship requirement is met.

<sup>&</sup>lt;sup>3</sup> Excludes grace period.

In Alabama and Tennessee the State Licensing Board for the Healing Arts issues licenses. In Indiana, the Clerk of the Circuit Court in county of residence of the applicant has this function.

Biennial, even years.

The board or committee recommends to the department which has this function. In Connecticut and Hawaii the Department of Health has

<sup>&</sup>lt;sup>7</sup> Biennial, odd years.

<sup>8</sup> This is the function of the Supreme Court in the District of Columbia and the State Medical Disciplinary Board in Washington. The Administrative Hearing Commissioner has this function in Maine where the board may directly suspend a license only in cases of mental illness.

<sup>•</sup> No renewal required.

<sup>10</sup> Triennial, 1966, 1969, etc.

<sup>1</sup> Includes graduates of approved Canadian medical schools. See table 85 for specific requirements for licensure of other foreign-trained physicians. <sup>2</sup> State residence of 1 year is required in Hawaii and 90 days in Utah. A reference attesting to good moral character is required in all States.

Physical examination is not required in any State.

6 Includes interview.

<sup>7</sup> May substitute 4 years of practice in Alaska and 5 years in Florida.

<sup>9</sup> Part or all of the examination is prepared by the National Board of Medical Examiners.

10 1-year internship is voluntary.

<sup>3</sup> All States except Arkansas, Florida, Indiana, Louisiana, Michigan, North Carolina, and Texas will license by endorsement applicants certified by the National Board of Medical Examiners. Georgia will accept only those certified prior to October 15, 1953. + x = full citizenship. xx = full citizenship or legal declaration of intention. For Canadian citizens, Montana and Nevada accept declaration of

The 4-year medical program must be completed in a school that is a member of the Association of American Medical Colleges and is approved intention. by the Council on Medical Education of the American Medical Association.

<sup>\*</sup> Part or all of the written examination is prepared by the Professional Examination Service of the American Public Health Association.

<sup>&</sup>lt;sup>1</sup> Includes fees for application and initial license where such fees are applicable.

<sup>&</sup>lt;sup>2</sup> Of all fees which are deposited in the State treasury, 90 percent in Arizona, Colorado, Florida, and Oregon; 80 percent in Kansas; and 85 percent in Nebraska are used to finance the board.

Minimum. Same as reciprocating or endorsing State if their fee is higher.

<sup>4</sup> Biennial renewal.

<sup>\*</sup> Fee for licensure by endorsement of National Board of Medical Examiners is \$50 in Connecticut, Missouri, and Oregon and \$35 in the District of Columbia.

<sup>•</sup> Nonresident fee is \$50.

<sup>&</sup>lt;sup>7</sup> Fees in excess of \$25,000 at the end of the fiscal year revert to the general fund.

<sup>\*</sup> Triennial renewal.

All fees, except the annual registration fees which are deposited in a special fund in the State treasury to be expended as specified by an itemized appropriation for enforcement of the licensing law and dissemination of information.

<sup>&</sup>lt;sup>1</sup> Includes reinstatements.

<sup>&</sup>lt;sup>2</sup> Data from the American Medical Association.

<sup>&</sup>lt;sup>1</sup> Total number of licenses in effect in 1965.

<sup>\*</sup> Total number of licenses in effect in 1965 was 48,412 in California; 6,240 in Indiana; 10,460 in Maryland; and approximately 2,995 in Kentucky; 3,675 in Maine; and 12,000 in Ohio.

<sup>&</sup>lt;sup>5</sup> No renewal required. In Maine the first renewal was July 1, 1966. Data not available on total number of licenses in effect in 1965. Mississippi reports 1,733 physicians practicing in the State as of December 31, 1965.

Approximate. Exact i

<sup>\*</sup> Total number of licenses in effect in 1964 was 2,242.

#### **CHAPTER 16**

### PHYSICIANS (D. O.)

All States license *Doctors of Osteopathy* (D.O.). Forty-one States and the District of Columbia grant unlimited practice rights. Some of these States also issue limited licenses which place restrictions on the practitioner's right to use drugs or perform surgery. Nine States issue limited licenses only.

Eight of the laws were enacted prior to 1900 and 30 during the first decade of this century. The last enactment was in Alaska in 1966; however, osteopathic physicians were included under this State's basic science law as early as 1946 (table 88).

The licensing agency is an osteopathic board composed solely of members of that profession in 24 States and with one to three additional persons in 3 States. In the remaining States the same board which licenses doctors of medicine licenses doctors of osteopathy. However, four of these boards have no osteopathic members. Maryland and Nebraska have two boards—an osteopathic board which issues limited licenses and a medical board which issues unlimited licenses.

The 53 boards range in size from 3 to 16 members. With the exception of four boards, the range of osteopathic members is from one to six (table 89).

The board or committee issues the initial license in 36 States and recommends issuance

in 14. In California the board does not grant initial licenses but does renew existing ones. Temporary licenses are issued in 21 States. Provisions for licensing foreign-educated physicians exist in 11 jurisdictions (table 90).

The degree of Doctor of Osteopathy from an approved college is the usual requirement for licensure. The period of professional education varies from 3 to 7 years. Actually total training in the United States now takes at least 7 years—3 preprofessional and 4 professional. One year of internship following graduation from an osteopathic college is an additional requirement in 32 States (table 91).

A written examination for the initial license is required in all States. In a large number of States graduates of both medical and osteopathic colleges take the same basic examination for State board certification in general medicine and surgery. Fees for the application, examination, and initial license range from \$10 to \$100; for reciprocity or endorsement, from \$20 to \$150; for renewal, from \$2 to \$25 (table 92).

The renewal period is biennial in 6 States and annual in 37. Renewals are not required in the remaining States. Licensure statistics are presented in table 93.

Colorado, District of Columbia, Hawaii, Maryland, Minnesota, New Hampshire, New Jersey, New Mexico, New York, Texas, and West Virginia have provisions for licensing foreign-educated osteopathic physicians.

<sup>2</sup> Renewals are annual unless otherwise specified.

#### FOOTNOTES FOR TABLE 90—Continued

- \* Temporary or limited licenses or permits are issued to:
  - A-qualified applicants until next board meeting.
  - B—interns and/or residents.
  - C-hospital medical officers.
  - D--qualified applicants until citizenship requirements are met.
  - E-out-of-State licensed physicians for locum tenens practice.
- 4 Excludes grace period.
- In Alabama and Tennessee the State Licensing Board for the Healing Arts issues licenses. In Indiana the Clerk of the Circuit Court in the county of residence has this function.
  - <sup>6</sup> No renewal required. In Louisiana the department issues initial licenses.
  - <sup>7</sup> Renews licenses to practice osteopathy. No new licenses are issued in California. In Minnesota new licenses are issued only to practice medicine.
- The board or committee recommends to the department which has this function. In Connecticut and Hawaii the Department of Health has this function.
  - Biennial, odd years.
  - 10 The Supreme Court of the District of Columbia has this function. In Louisiana the board refers cases to the proper prosecuting officers.
  - 11 Biennial, even years.
  - 12 Triennial, 1969, 1972, etc.

<sup>1</sup> State residence of 90 days is required in Utah. A reference attesting to good moral character is required in all States. Physical examination is

<sup>&</sup>lt;sup>2</sup> All States except Alabama, Alaska, Florida, Illinois, Indiana, Kentucky, Michigan, Mississippi, Nebraska, New Jersey, New York, Pennsylnot required in any State. vania, South Carolina, Texas, Utah, Washington, and Wisconsin will accept certification by the National Board of Examiners of Osteopathic Physicians and Surgeons in lieu of part or all of the board's examination.

x = full citzenship. xx = full citizenship or legal declaration of intention.

<sup>&</sup>lt;sup>4</sup> The 4-year osteopathic program must be completed in a school approved by the American Osteopathic Association and/or the board.

<sup>&</sup>lt;sup>5</sup> Includes interview.

<sup>&</sup>lt;sup>6</sup> Requirements are for issuance of limited licenses.

Part or all of the written examination is prepared by the Professional Examination Service of the American Public Health Association.

In the District of Columbia, Massachusetts, and New York part of the written examination is prepared by the National Board of Medical Examiners and in Tennessee by the National Board of Examiners for Osteopathic Physicians and Surgeons.

For full surgical privileges 1-year internship is required in Utah and 1-year of postgraduate work in addition to the 1-year internship is required in Hawaii and Oklahoma. In Ohio a 1-year internship is voluntary.

#### CHAPTER 17

### **PODIATRISTS**

All States and the District of Columbia license *podiatrists*, formerly known as chiropodists. In 1908 the first State law was passed and before 1920 half of the States had enacted statutes (table 94).

Licensing boards composed entirely of podiatrists administer these laws in 23 States. In Mississippi regulation of podiatrists is carried out by the Board of Health with no representatives from this profession. In other States there are boards which include podiatrists as well as practitioners of other branches of the healing arts (table 95).

At least five States issue temporary licenses to qualified applicants until the next board meeting. Seven States and the District of Columbia have provisions for licensing foreign-educated podiatrists (table 96).

To qualify for a license in 32 States, an applicant must have completed at least 2 years of preprofessional college and have

graduated from a college of podiatry with a degree of Doctor of Podiatry (Pod.D. or D.P.) or Doctor of Podiatric Medicine (D.P.M.). In 16 States the preprofessional education requirement is reduced to 1 year, while in the remaining 2 States there are no specifications of preprofessional education. A few States require a period of internship or practice (table 97).

Examinations which are required in all States have fees from \$15 to \$100. Renewal fees are from \$1 to \$30. Reciprocity or endorsement fees, provided for in most of the States, are usually \$50 to \$100 (table 98).

Annual renewal is required in 42 jurisdictions, and biennial in 7. No renewal is required in Mississippi. Although the statistics in table 99 are incomplete for many of the States, a 1964 study by the American Podiatry Association indicated that there were 9,092 State registrations for podiatrists.

<sup>&</sup>lt;sup>2</sup> Includes reinstatements.

<sup>&</sup>lt;sup>2</sup> Total number of licenses in effect in 1965 was 1 in Alaska; 900 in California; 1,103 in Illinois; and 208 in Indiana.

<sup>4</sup> No renewal required.

<sup>&</sup>lt;sup>5</sup> Biennial renewal provision became effective in 1965. Total licenses issued as of December 31, 1964 were 127.

# **PSYCHOLOGISTS**

The statutes for psychologists, who are licensed in 36 States, were enacted between 1945 and 1967 (table 100). In 13 States and the District of Columbia the professional association certifies psychologists. Indiana is the only State with no provision for licensure or certification.

Titles used in the licensing acts are psychologist, certified psychologist, certified consulting psychologist, licensed psychologist, licensed applied psychologist, and registered psychologist. In 21 States the title is protected (table 100).

The definition in the act may state that a person is a psychologist when he calls himself one and does psychological work; thus the definition is not restricted to health personnel. Specialists in all fields of psychology are licensed in at least one State. Clinical psychologists and counseling psychologists are licensed in most States that regulate the profession. Exemptions from the licensure law are usually stipulated in terms of the work setting. A few States specifically exempt social psychologists.

Four States provide for more than one type of license but only information for the license with the highest educational requirement has been presented in the accompanying tables. Applicants with a master's degree in psychology are licensed as psychological examiners in Arkansas, Michigan, and Tennessee and as certified psychologists in Minnesota. Michigan also licenses as certified psychologists applicants with a doctorate who do not meet experience requirements for certification as consulting psychologists.

The State licensing agencies are psychology

boards or committees. Of the 30 agencies, 28 are composed solely of psychologists, usually consisting of five members. In California and Michigan there is one member who is not a psychologist (table 101).

The psychology boards or committees issue initial licenses in 24 States and recommend issuance by their departments in 4 others. In the remaining two States recommendations are made to the Board of Medical Examiners or to the Board for the Healing Arts. Eight States have provisions for issuing temporary licenses and 13 States, for licensing persons educated outside of the United States (table 102).

A doctoral degree in psychology from an accredited college is the usual professional education requirement. Equivalents as determined by the board may include completion of all course work for a doctorate in psychology or a doctorate in a related field, with qualifying experience and recognized competence. Waiver or "grandfather" clauses provide for licensure of persons in practice when the law was enacted or for persons with a master's degree and qualifying experience (table 103).

Written examinations are required in all States except Arizona. Fees for examination and initial license range from \$15 to \$65. Fees for reciprocity or endorsement are from \$10 to \$50 and for renewals, from \$2 to \$30 (table 104).

License renewals are annual in 18 States and biennial in 9. In Kentucky the renewal period is 3 years; in Maine, 5 years. No renewal is required in Tennessee. Licensure statistics appear in table 105.

Table 100. DATE OF FIRST ENACTMENT AND NATURE OF STATE LICENSING STATUTES FOR **PSYCHOLOGISTS**

<sup>1</sup> Compulsory (C) = only persons holding a license are permitted to practice the occupation, and unlicensed persons are prohibited from working in the field. Some laws and regulations do include exceptions which may invalidate compulsory provisions.

Voluntary (V) = only persons holding a license are authorized to use a particular title or official designation; unlicensed persons are not prohibited from working in this field, but they may not use the protected title.

Data not available for other licensing States. Law was not enacted until 1966 in Mississippi or New Jersey.

• No renewal required.

Includes licenses issued to consulting psychologists, certified psychologists, and psychological examiners.

Includes 4 licenses issued by waiver in California, 440 in Illinois, and 15 in Minnesota.

<sup>&</sup>lt;sup>5</sup> Total number of licenses in effect in 1965 was 257 in California, 265 in Connecticut, and 49 in Maine.

<sup>&</sup>lt;sup>7</sup> Amendment in 1966 requires annual renewal. A total of 81 licenses were in effect in 1964.

#### **CHAPTER 19**

### RADIOLOGIC TECHNOLOGISTS

New York is the only State that regulates the practice of radiologic technology through the examination and licensing of operators of X-ray equipment. The X-ray technician is defined as one who uses X-ray on human beings under the supervision of a licensed practitioner of medicine (radiologist), dentistry, podiatry, osteopathy, or chiropractic. Dental assistants are specifically excluded.

A person holding a license as an X-ray technician may use the title "licensed X-ray technician" or the letters "L.X.T." after his name. As of October 1965 a total of 6,300 licenses were in effect of which 3,600 had been issued by examination and 2,700 by endorsement of applicants certified by the American Registry of Radiologic Technologists.

The 1964 law establishes an X-Ray Technician Board of Examiners within the State Department of Health, consisting of seven members—two radiologists, one physician, one hospital administrator, one health physi-

cist, and two X-ray technicians. The department requires successful completion of a written examination to qualify for practice as an X-ray technician. Certification by the American Registry of Radiologic Technologists may be accepted in lieu of the examination.

The department issues a license upon the payment of \$20. The biennial renewal fee is \$15. These fees are deposited in the State general revenue fund from which the board is financed.

Educational qualifications specify high school graduation and a 24-month course of study in X-ray technology in a school registered by the department, or the equivalent as determined by the department. Training programs within the State are subject to site inspection, while those out of State may be accepted if certified by the American Registry of Radiologic Technologists.

Information on licensing practices is presented in tables 106–110.

<sup>&</sup>lt;sup>2</sup> Biennial renewal.

## **SANITARIANS**

Statutes enacted in 30 States for the licensing of sanitarians vary in coverage and type. Two-thirds of the States have voluntary registration laws which cover only use of the title, such as registered sanitarian, sanitarian, professional sanitarian, and sanitary inspector. The remaining States have compulsory laws but in California the compulsory provisions apply only to sanitarians employed in local official agencies.

The first law was enacted in 1912 in New Jersey, followed by a 1945 statute in California. The other 28 laws were enacted after 1950 with Nevada becoming the 30th State when it passed its law on March 30, 1967 (table 111).

Administration is by sanitarian boards, committees, or departments varying in size from three to nine members. Of the 29 licensing bodies reported, 9 are composed exclusively of sanitarians while 3 have no representatives from the occupation (table 112).

The sanitarian licensing body functions independently in 19 States, with the power to issue, suspend, and revoke licenses. The department or the board of health, acting on the sanitarian board's recommendation, is responsible for issuing licenses in the remaining States. In 12 States temporary licenses are available to sanitarian trainees who have

met all of the requirements except experience (table 113).

In two-thirds of the States the minimum educational qualification is a bachelor's degree with 15 to 30 units of basic science or a major in environmental health sciences. In the 20 States that require at least 4 years of college preparation, 17 also require some experience. In four States where at least 1 or 2 years of college are required, three have an additional requirement of experience. The five States that do not specify minimum education require from 2 to 10 years of experience for which education can usually be substituted. Education cannot be substituted for experience in 12 States (table 114).

Written examinations are required in all licensing States; the fees are usually \$10 to \$25. Renewal fees in the 27 States with this requirement range from \$2 to \$20. Fees for reciprocity or endorsement, available in 21 States, are from \$5 to \$25 (table 115).

Annual renewal of license is required in 26 States and biennial in 1; however, no renewal is needed in 2 States. The statistics reported in table 116 on licenses issued considerably understate the numbers of sanitarians engaged in practice, due to the limited coverage of persons in this occupation.

Table 111. DATE OF FIRST ENACTMENT AND NATURE OF STATE LICENSING STATUTES FOR SANITARIANS

<sup>1</sup> Data not available for Nevada.

<sup>2</sup> State residence of 1 year is required in Arkansas, Florida, and Texas. A reference attesting to good moral character is required in all States except Alabama, California, Colorado, Kentucky, Louisiana, Nebraska, New Jersey, New Mexico, South Dakota, Tennessee, and Wisconsin. Physical examination is not required in any State.

3 Requirements refer to licensure other than under "grandfather" or waiver provisions. These provisions expired in 1964 in Indiana and Nebraska; in 1965 in Georgia, Michigan, and Tennessee; in 1966 in Alabama, Illinois, and Texas; and in 1967 in South Dakota. All other waiver clauses expired prior to 1964.

 $4 \times$  full citizenship. xx = full citizenship or legal declaration of intention.

All States require high school graduation or equivalent.

Experience is in years unless otherwise indicated. Higher educational attainment may be substituted for part or all of experience requirement as follows: Idaho, Louisiana, Massachusetts, and Montana, all of experience requirement; Nebraska and Utah, all but 6 months; Illinois, Indiana, Michigan, Oregon, South Dakota, and Wisconsin, all but 1 year; North Carolina, all but 2 years. No substitution is allowed in Alabama, Arkansas, Colorado, Georgia, Kentucky, New Mexico, Oklahoma, South Carolina, Tennessee, Texas, Washington, and West Virginia.

7 Includes interview.

Part or all of the written examination is prepared by the Professional Examination Service of the American Public Health Association.

In Kentucky, applicant must also pass the merit or civil service examination. In Oklahoma the merit or civil service examination is given to State employees in lieu of the board's examination. In West Virginia the State Civil Service Examination is the only examination used.

10 4 years of college will be required in 1969.

In addition to the educational requirements shown a 3-month environmental sanitation course taken in a school of public health is required.

<sup>3</sup> No renewal required.

<sup>&</sup>lt;sup>4</sup> Total number of licenses in 1965 was 2,374 in California and 1,750 in New Jersey. <sup>5</sup> Includes 198 licenses issued by waiver in Georgia and 837 in Texas.

<sup>First licenses issued in 1965.
Includes 13 licenses issued by waiver in 1964 and 2 in 1965.</sup> 

# SOCIAL WORKERS

Social workers are "registered" in California, Oklahoma, Rhode Island, and Virginia, and "certified" in the State of New York. It is unlawful for any individual who has not received a certificate under the provision of these State laws to represent himself as a Registered Social Worker (R.S.W.) or in New York as a Certified Social Worker (C.S.W.). The California law was enacted in 1945; the others, after 1960 (table 117).

Qualifications for registration include completion of a 2-year course of study at a school of social work leading to a master's degree. In two States the board may accept a master's degree in a related field if the program requires at least 2 years to complete. There is an additional requirement of 2 years of full-time employment under competent supervision in Oklahoma. Written examinations are required in California and New York (table 119).

In addition to registered social workers, a second category is provided in two States—Social Worker Associates (S.W.A.) in Oklahoma and Associate Social Worker (A.S.W.) in Virginia. Qualification for registration in both States include a bachelor's degree and

2 years of experience in the field of social work.

Four of the social work licensing boards are attached to a department of State government. The boards are composed of five to seven members. In three instances all members are social workers, one board has two lay members, and the other has two associate social workers serving on the board (table 117).

Four boards have the power to suspend and revoke licenses, while three may also issue and renew licenses. In the remaining States the department has these functions. Annual renewal of license or registration is required except in New York where there is biennial registration (table 118).

Fees for the initial license range from \$5 to \$40; for license renewal, from \$1 to \$15. Funds collected by the board are used for the administration and enforcement of the licensure acts (table 120).

Statistics on licenses issued are available for California and Rhode Island. The data includes medical and psychiatric social workers as well as those in other fields of social work. In the other three States the acts are too recent to provide such information (table 121).

California	1 1	3,289 367	3,198 364	91 3	4 3,374	354	7	

<sup>1</sup> Data not available for New York, Oklahoma, and Virginia.

Requirements refer to licensure under other than "grandfather" or waiver provisions. These provisions expire in 1967 in Oklahoma and Virginia, and in 1968 in New York.

<sup>\*</sup>x=full citisenship. xx=full citisenship or legal declaration of intention.

<sup>4</sup> A master's degree in a related field, requiring a minimum of 2 years to complete may be substituted.

No examination at present, but the law provides for one. In New York, an examination will be held after July 1, 1968. No data are available on the type of examination to be used in Virginia.

<sup>&</sup>lt;sup>2</sup> Biennial renewal.

<sup>&</sup>lt;sup>2</sup> Includes reinstatements.

Includes licenses issued on the basis of inspection of credentials.

<sup>·</sup> Licenses in effect in 1965.

#### **CHAPTER 22**

### **VETERINARIANS**

Veterinarians are licensed in all States and the District of Columbia. They are among the early professions to be regulated, with nine States enacting statutes prior to 1900 (table 122).

Veterinary licensing boards regulate this profession in all States. In a few instances the boards are attached to departments of agriculture. The boards have three to seven members, all of whom are veterinarians except in six States (table 123).

Twenty-six States have provisions for issuing temporary licenses to qualified applicants pending completion of licensure by examination. An identical number of States have provisions for licensing foreign-educated applicants (table 124).

Applicants are required to have at least 6 years of specialized education—2 years of college and 4 years of professional school leading to the degree of Doctor of Veterinary

Medicine (D.V.M.). In Oklahoma and Oregon a period of 4 years of preprofessional education is required. In order to qualify for licensure in four States experience requirements must also be met. Successful completion of a written examination is specified except in Delaware. A practical examination is required in the majority of the States, and an oral examination in all except Michigan, New York, Texas, and Vermont (table 125).

Examination fees are from \$15 to \$100; renewal, from \$1 to \$35. Reciprocity or endorsement fees in the 31 States with such provisions range from \$15 to \$100 (table 126).

Annual renewal of the license is the usual practice. Six States specify biennial renewal while five have no renewal provisions. Information on numbers of licenses issued in 1965 has been provided by all except four States (table 127).

<sup>2</sup> Renewals are annual unless otherwise specified.
3 Temporary licenses or permits are issued to qualified applicants pending completion of licensure by examination. New Hampshire, Oregon, and Utah also issue temporary licenses to applicants who meet all requirements except experience.

<sup>+</sup> Excludes grace period.

<sup>5</sup> Biennial, odd years.

<sup>&</sup>lt;sup>6</sup> The department issues initial licenses. No renewal is required.

<sup>&</sup>lt;sup>7</sup> The board or committee recommends to the department which has this function.

Biennial, even years.

No renewal required.

### GOVERNORS' CONFERENCE

1313 EAST SIXTIETH STREET

CHICAGO, ILLINOIS 60637

JUNE 17, 1965

#### MY DEAR GOVERNOR:

Back in 1951, the Governors' Conference requested that the Council of State Governments make a survey of professional and occupational licensing practices in the several states. Working through the Governors' offices, we undertook such a study and, in 1952, issued the report "Occupational Licensing Legislation in the States." This report has long since been out of print, and the information is badly out of date. Nothing comparable has been published in the meantime.

The National Center for Health Statistics of the U.S. Public Health Service has approached us with the request for updating the information on licensing provisions in the states for occupations and professions in the health field. The data to be gathered would comprise information on the licensing agency, its organization, responsibilities, composition, staffing, and financing, as well as data on licensing requirements and statistical information on numbers of licenses issued.

It is believed that this survey will be of widespread interest and value to the states and the professions. We would be most grateful for your assistance in securing the basic data from your state. As you will note from the enclosed list of occupations in the health field, their number is large. We are not certain which of these or which others may be subject to licensing in your state and therefore hope that you can have this list checked off as it applies to your state. We further hope that you can designate a person to whom we may send the appropriate number of questionnaires for distribution to the licensing agencies involved and who may serve, to the extent needed, as our liaison person with the licensing agencies.

We look forward to learning the name, title and address of the contact person you may designate and to receiving the list of occupations in the health field licensed in your state. Three copies are enclosed, one to be retained and two to be returned to us.

We are most reluctant to impose this burden on you and your staff, but we know that we will not be able to get the job done without your cooperation.

Many thanks and kindest personal regards.

Very sincerely.

BREVARD CRIHFIELD

Secretary

The attached list of HEALTH OCCUPATIONS AND PROFESSIONS LICENSED IN YOUR STATE will serve as a basis for a survey of state licensing provisions being conducted by the Council of State Governments in cooperation with the National Center for Health Statistics of the U.S. Public Health Service. The survey is to cover those health occupations and professions for which the licensing (or registration) procedure is provided by state law; is administered by an agency of the state; and meets the following criteria:

- 1. The license (certificate of registration or other credential) is issued to an individual, rather than to a company or organization;
- 2. The license authorizes an individual to practice or engage in an occupation or profession, or to use a particular title.
- 3. To secure a license, the applicant must (a) have certain educational qualifications; or (b) have served as an apprentice or have other experience; or (c) pass an examination as to his knowledge or skills; or (d) meet any combination of these requirements.

Please return in DUPLICATE to: The Council of State Governments 1313 East 60th Street Chicago, Illinois 60637 OCCUPATIONS AND PROFESSIONS IN THE OF	HEALTH FIELD LICENSED IN THE STATE
A. Please check whether or not the selected heal in your state. Where several equivalents are listed und	th occupations and professions listed below are licensed der the same number, please underscore the one or ones state for any of them, please insert the one used in your    Licensed in your state   Health Occupation or Profession   Yes   No
*Information requested since the profession includes specialties  B. Please list below any other occupations or pro- in your state:	fessions in the health field for which a license is required
C. Please indicate below the person in your state ments and to whom questionnaires should be sent: (Name)(Title)(Agency)	who will serve as liaison with the Council of State Govern-  (Street)  (City & State)  (Zip Code)  (Phone)

#### THE COUNCIL OF STATE GOVERNMENTS

1313 EAST SIXTIETH STREET, CHICAGO, ILLINOIS 60637

We were delighted to learn that the Governor has designated you as our liaison for your State in connection with the survey of state licensing provisions for occupations and professions in the health field which we are conducting in cooperation with the National Center for Health Statistics of the U.S. Public Health Service.

We appreciated receiving the list of occupations subject to licensing in your state. Enclosed are questionnaires for each of them, in sets of three (one to be retained, two to be returned to us upon completion). So as to be sure that the forms will get back to us, our address is listed at the top. However, rather than having them returned to us directly, you may wish to first receive them back from the parties to whom you distribute them for completion, for subsequent transmittal to us through your office. We would be grateful if you let us know which procedure you intend to follow and if, in any event, you could send us the names of the parties, with titles and addresses, who will be completing the questionnaires, indicating for which occupations they have responsibility.

A number of states reported that they are licensing some occupations in the health field not included in our original list of twenty-five. As a result, we would like to include three additional ones in our survey. They are:

- 26. Clinical laboratory director or supervisor; bioanalyst
- 27. Naturopath, drugless therapist and related occupations
- 28. X-ray technician.

Should any of these be subject to licensing in your state and you do not find questionnaires for them attached, please let us know so that we may forward the necessary forms to you. We have refrained from adding several other occupations specified by a few states.

As far as engineers are concerned, we do not intend to cover the whole broad field of this profession. We would expect completion of the forms only if special licensing provisions exist for sanitary and other health engineers and would like to have the statistics on the last page of the questionnaire limited to the health field.

With regard to psychologists and social workers, however, we would appreciate full responses for both professions. Under item XII—the statistics—we would like to secure, in addition to overall data for these two professions, sub-data for clinical and other health psychologists, and for medical and psychiatric social workers, respectively. For the latter purpose, a page 11 has been added to the questionnaire.

Mrs. Ruth L. Turk of our staff will be working on the study. I would suggest that any future correspondence with regard to it be addressed to her.

Again, many thanks for your cooperation. We hope that all the questionnaires can be returned to us by October 15, 1965. If there is any way in which we can be of help, please be sure to let us know.

Sincerely,

Brevard Crihfield
Executive Director

# THE COUNCIL OF STATE GOVERNMENTS

1313 EAST SIXTIETH STREET, CHICAGO, ILLINOIS 60637

#### **AUGUST, 1965**

TO LIAISON PERSONS FOR STUDY OF STATE LICENSING OF OCCUPATIONS AND PROFESSIONS IN THE HEALTH FIELD:

Listed below are all the health occupations and professions included in the survey.

A checkmark has been put next to all those listed as being licensed in your state and questionnaires for them are enclosed in triplicate.

- 1. Administrator of health department (health officer)
- 2. Administrator of hospital (superintendent)
- 3. Administrator of nursing home
- 4. Chiropractor
- 5. Dental assistant
- 6. Dental hygienist
- 7. Dental laboratory technician
- 8. Dentist
- 9. Engineer, professional
- 10. Medical laboratory technician or technologist
- 11. Midwife
- 12. Nurse, practical; vocational nurse
- 13. Nurse, professional (R.N.); public health nurse
- 14. Nursing attendant; psychiatric aide
- 15. Optician; ophthalmic dispenser or technician
- 16. Optometrist
- 17. Pharmacist
- 18. Physical therapist
- 19. Physician (M.D.); doctor of medicine
- 20. Physician (D.O.); doctor of osteopathy
- 21. Podiatrist; chiropodist
- 22. Psychologist
- 23. Sanitarian; inspector (food, drug, meat, dairy, sanitary)
- 24. Social worker
- 25. Veterinarian
- 26. Clinical laboratory director or supervisor; bioanalyst
- 27. Naturopath, drugless therapist, and related occupations
- 28. X-ray technician

Please return completed questionnaires in duplicate by October 15, 1965.

Ed. note: According to questionnaire returns "dental assistant" and "dental laboratory technician" are not licensed in any State. "Nursing attendant; psychiatric aide" is mentioned in this report with practical nurses. Thus the list is reduced from 28 to 25 occupations.
